Unified Modeling Language (UML) Structural & Behavioral Models

Academic Grievance, No-Dues & Clearance Automation Engine

Punjab Engineering College (Deemed to be University), Sector 12, Chandigarh
Submitted by: Raghav Bhardwaj & Karan Jain
Submitted to: Dr. Rajesh Bhatia (Course: Software Engineering)

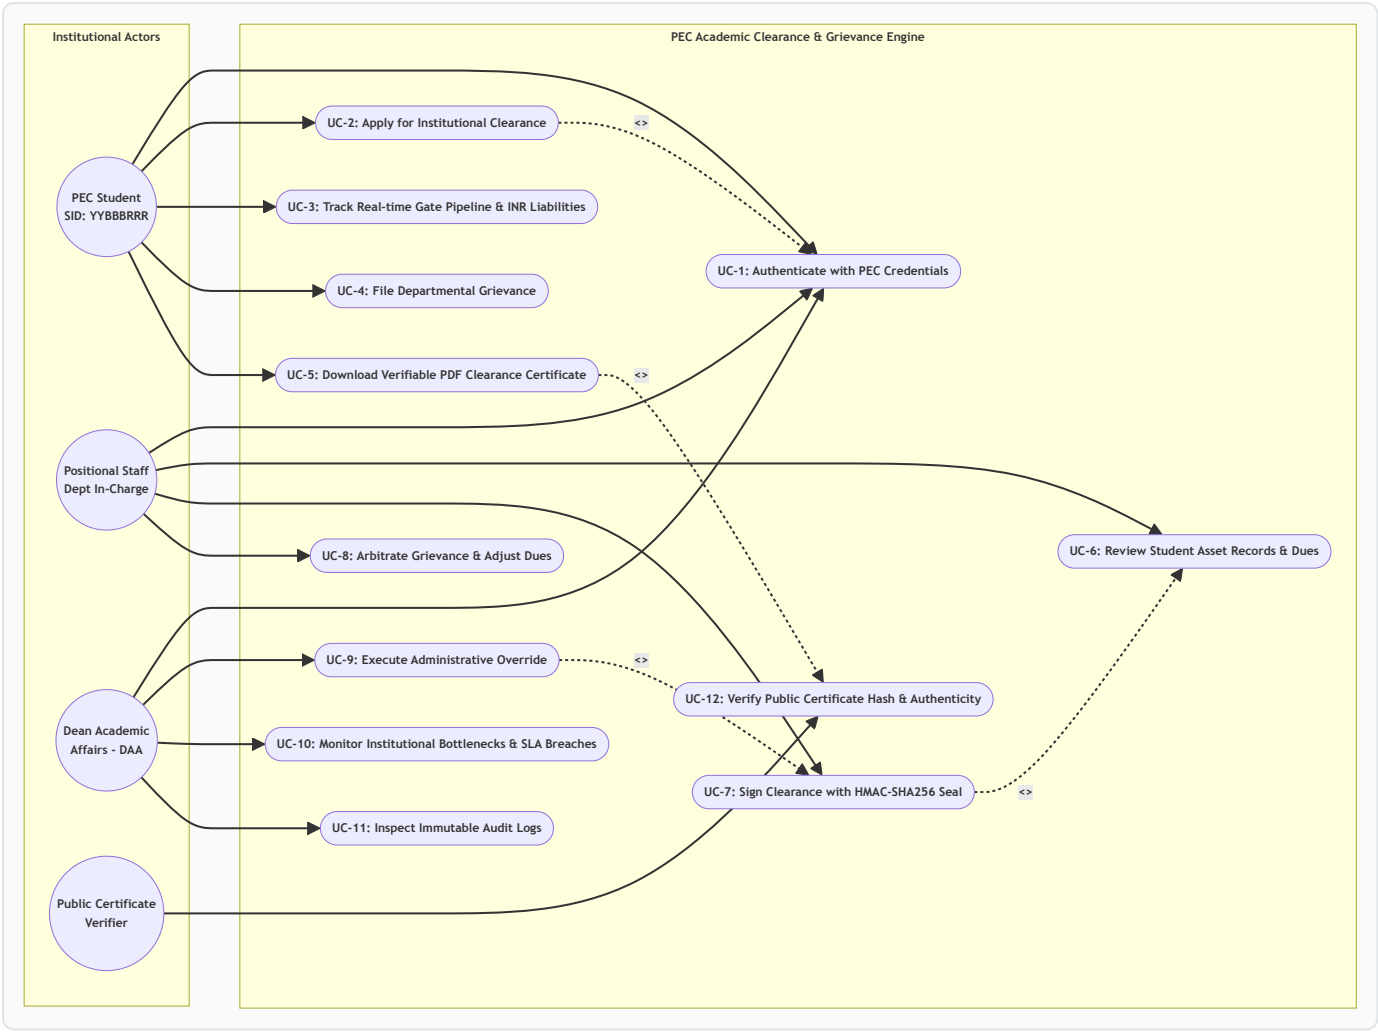

---

1. Use Case Model & Diagram

1.1 Actors & Role Boundaries

- **Student Actor:** Registered PEC student identified by an 8-digit SID (e.g., `22103042`).
- **Positional Staff Actor:** Departmental authority operating under institutional designations.
- **Dean Academic Affairs (DAA / Admin Actor):** Executive authority holding override privileges and institutional audit oversight.
- **Public Certificate Verifier Actor:** External unauthenticated party validating clearance credentials.

1.2 Use Case Diagram

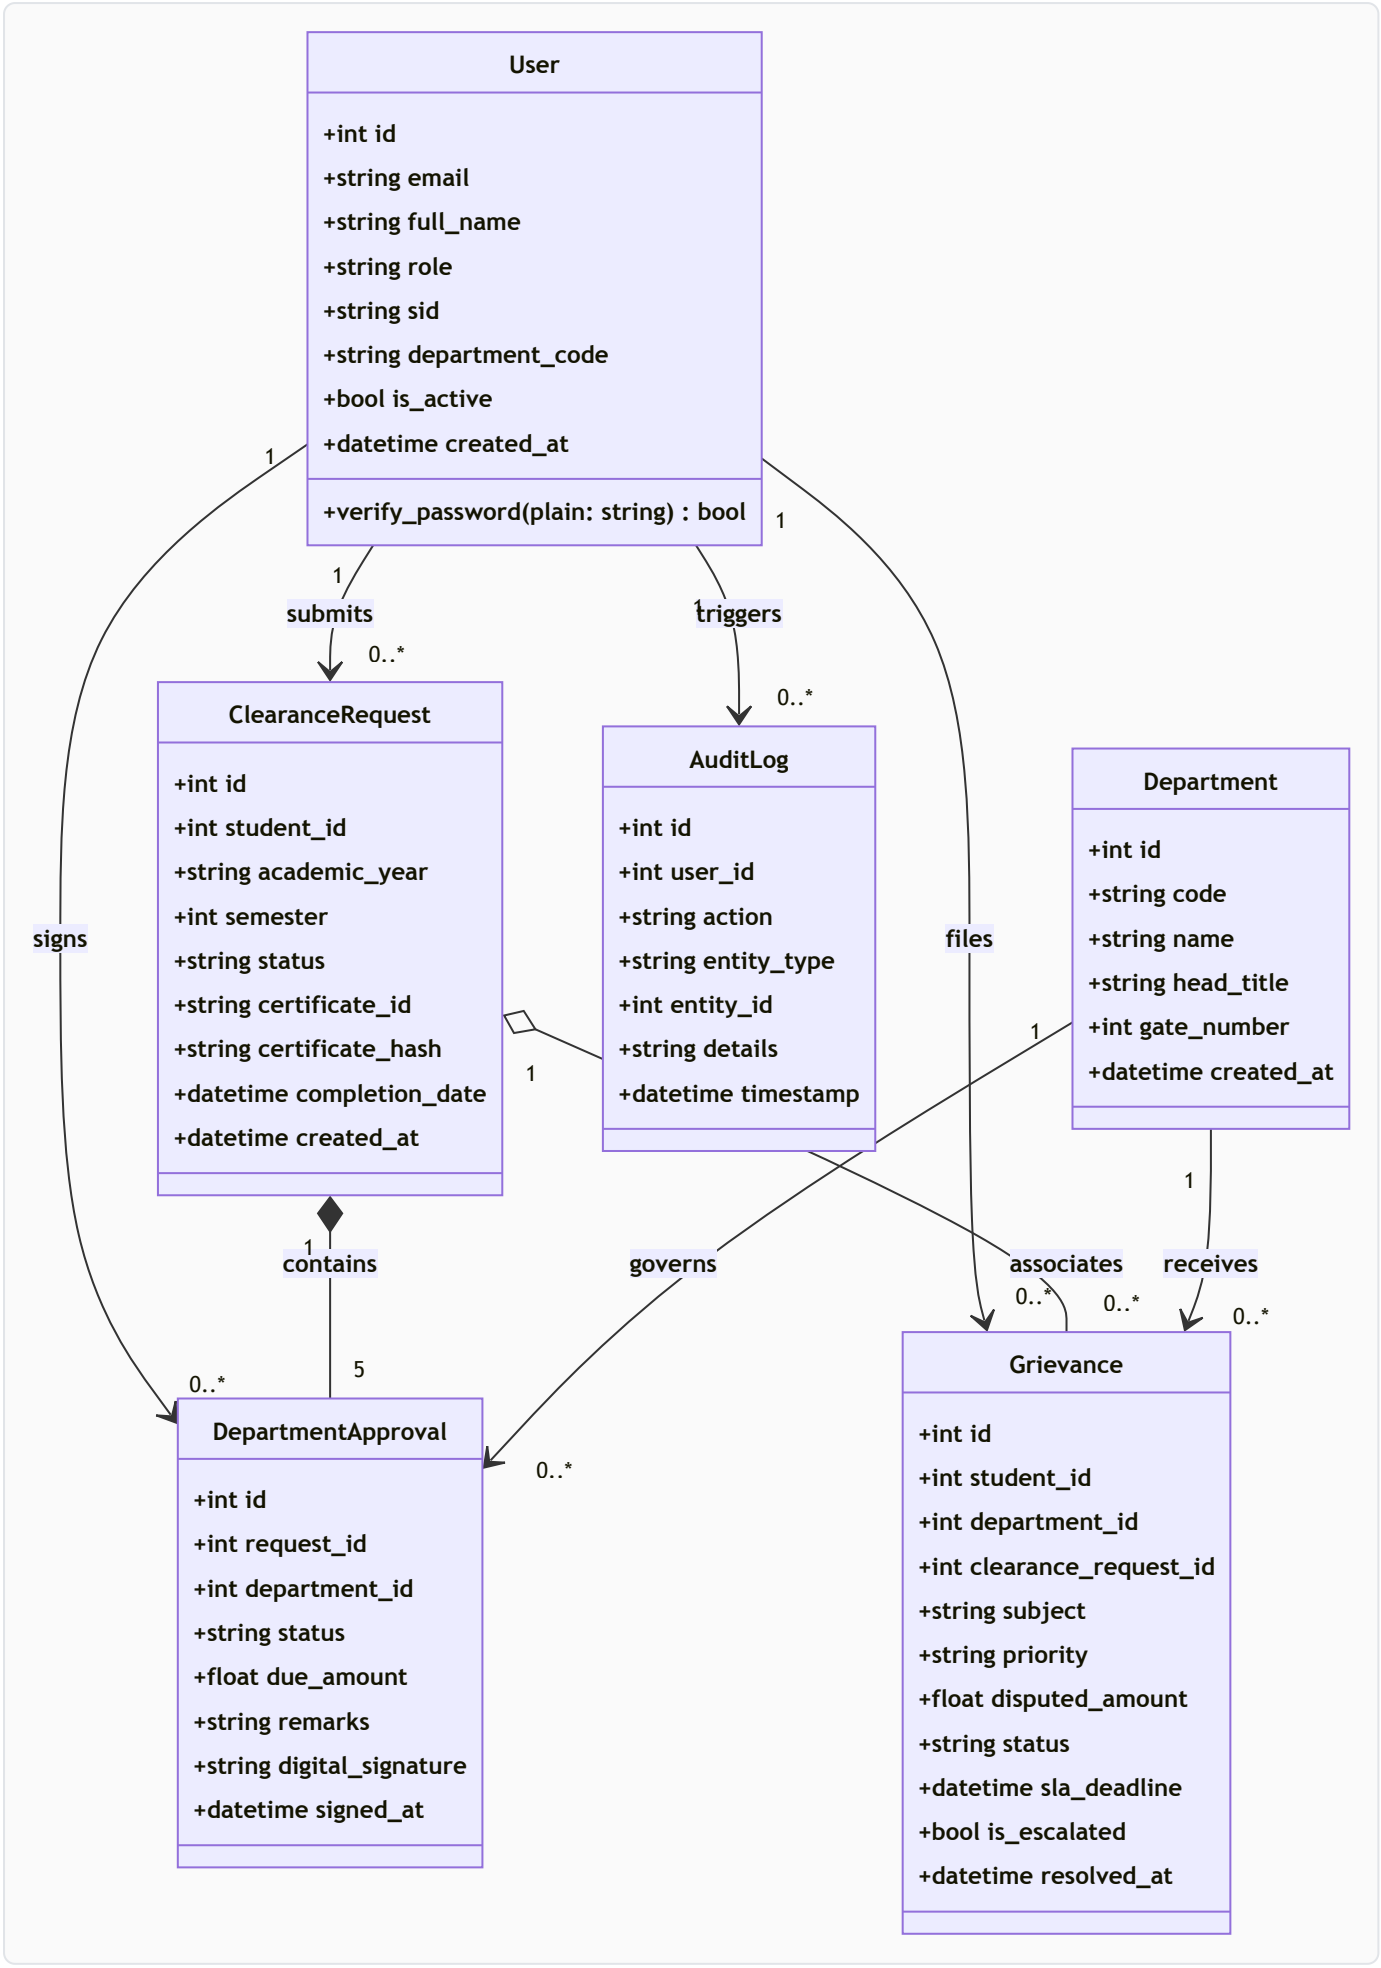

---

2. Static Structural Model: Class Diagram

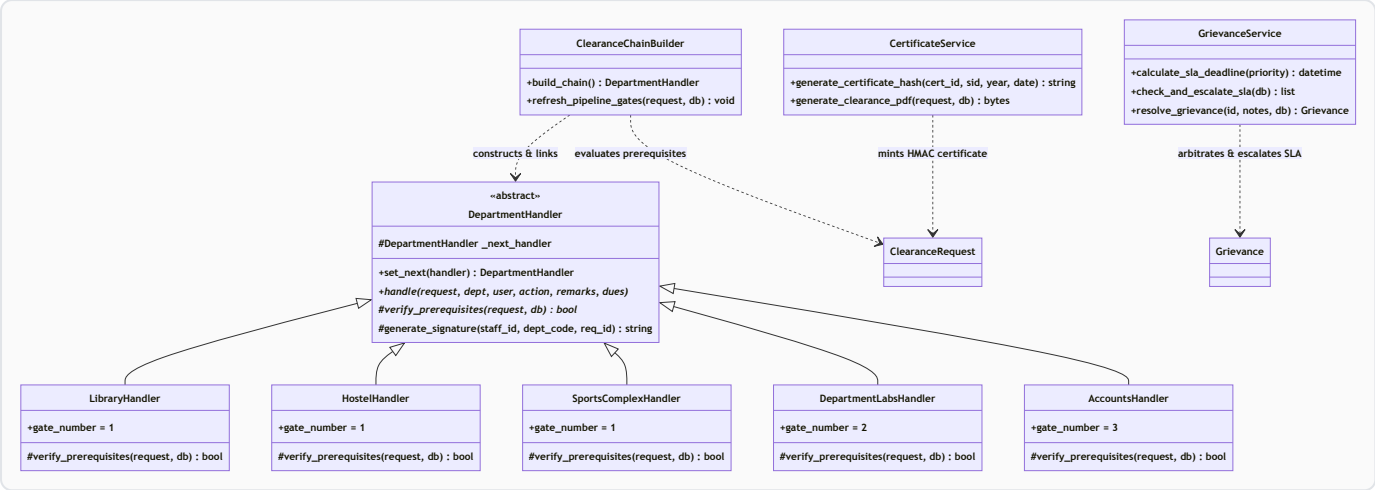

The static structural architecture of the system is divided into two focused, high-contrast class diagrams to ensure maximum visual clarity and readability:

1. **Core Domain Entity Model** (relational data models, attributes, methods, associations, and multiplicities)
2. **Behavioral Chain of Responsibility & Services Model** (handler hierarchy, gate verification, and service orchestration)

2.1 Core Domain Entity Class Diagram

User

2.2 Behavioral Chain of Responsibility & Service Orchestration Diagram

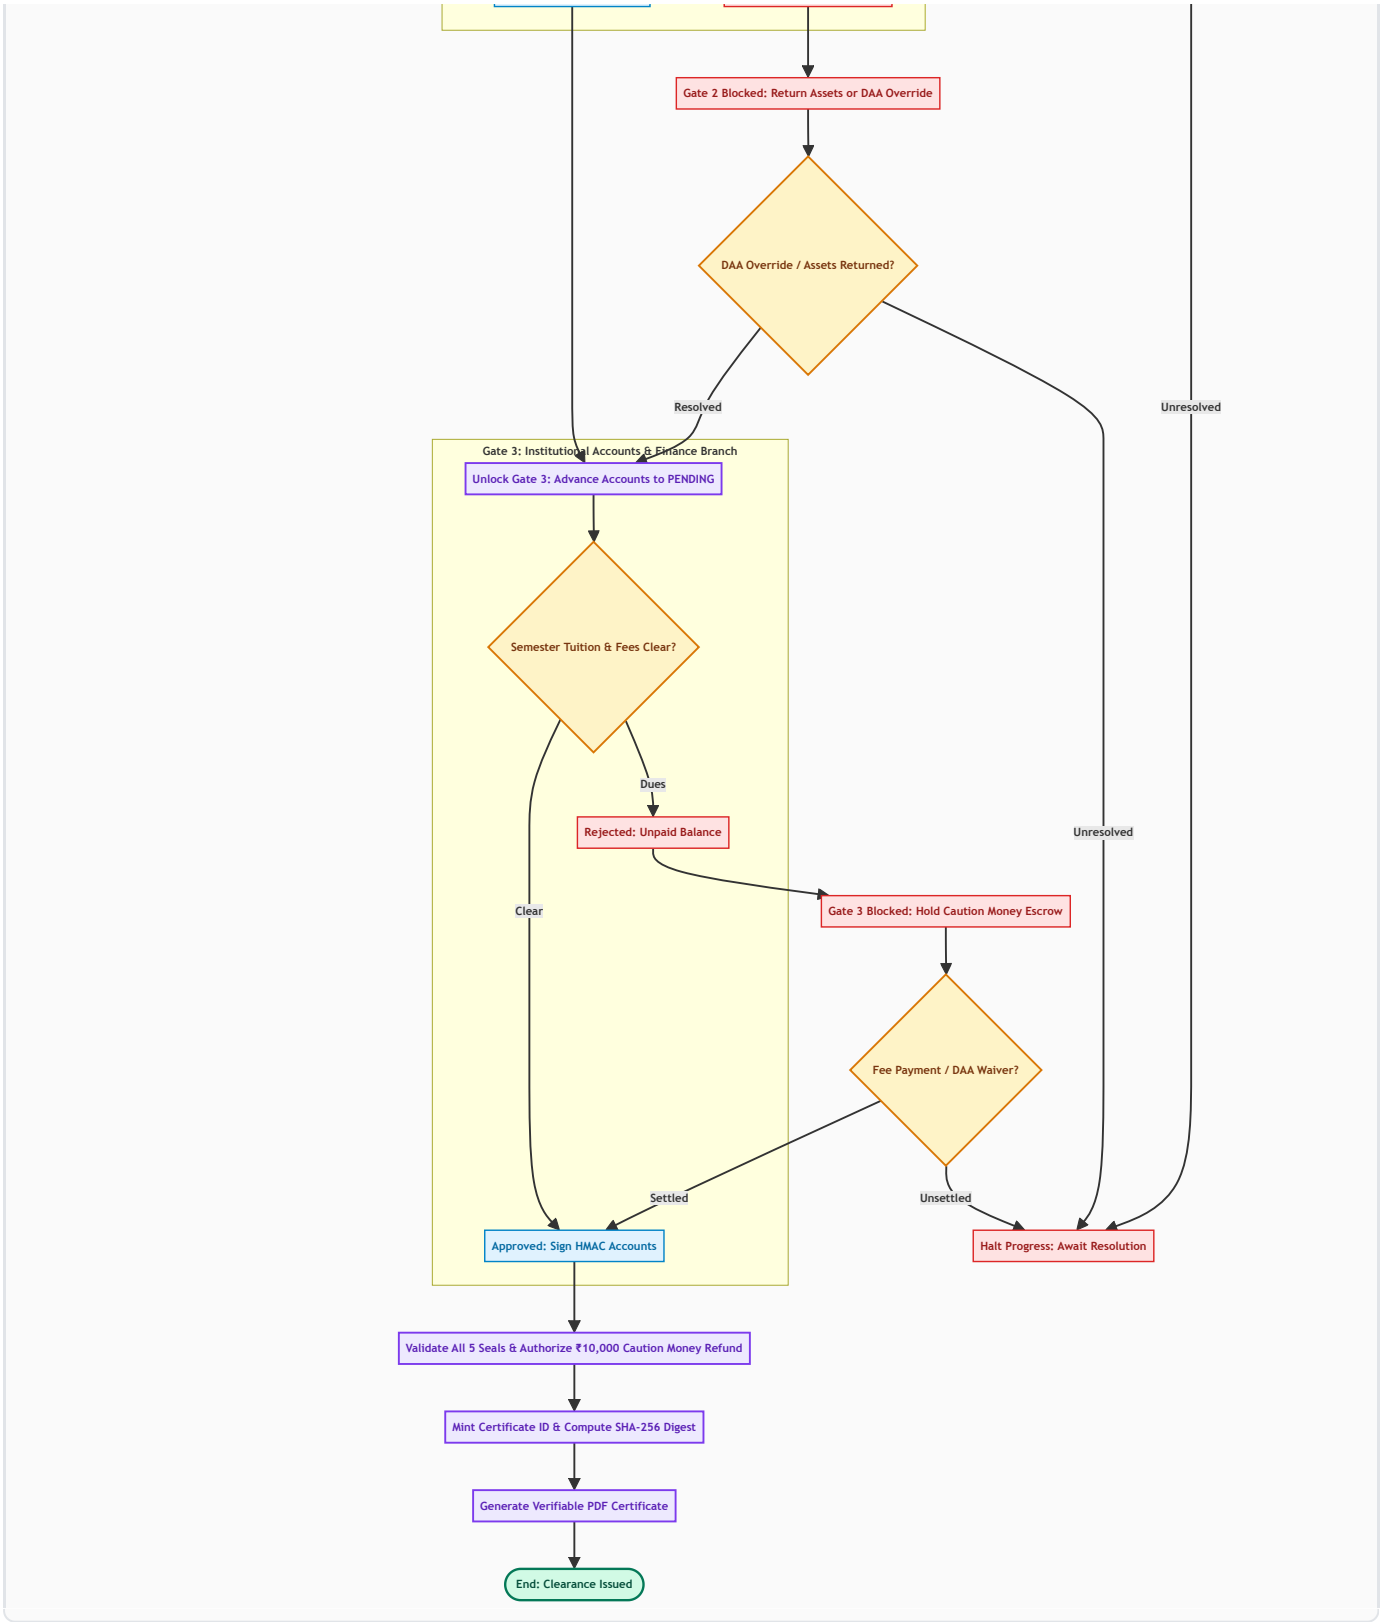

---

3. Dynamic Behavioral Model: Activity Diagram

This activity diagram models the end-to-end dynamic workflow of a PEC clearance request, illustrating parallel concurrency forks, barrier joins, and sequential dependency gates:

Start: Student Submits Clearance
Initialize 5 Department Approval Records
Gate 1: Concurrent Central Facilities (Parallel Reviews)
FORK: Gate 1 Parallel Review
Library Books / Dues Clear?
Hostel Room & Mess Clear?
Sports Equipment Clear?
Clear
Dues
Clear
Dues
Clear
Dues
Approved: Sign HMAC Library
Rejected: Overdue Books / Fine
Approved: Sign HMAC Hostel
Rejected: Mess Dues Liability
Approved: Sign HMAC Sports
Rejected: Equipment Penalty
JOIN: Gate 1 Barrier
All 3 Gate 1 Facilities Approved?
No
Yes
Gate 1 Blocked: Resolve Dues or Appeal
DAA Override / Dues Settled?
Resolved / Overridden
Gate 2: Department Computing & Hardware Labs
Unlock Gate 2: Advance Labs to PENDING
Lab Kits & Workstation Clear?
Clear
Missing
Approved: Sign HMAC Labs
Rejected: Hardware Liability

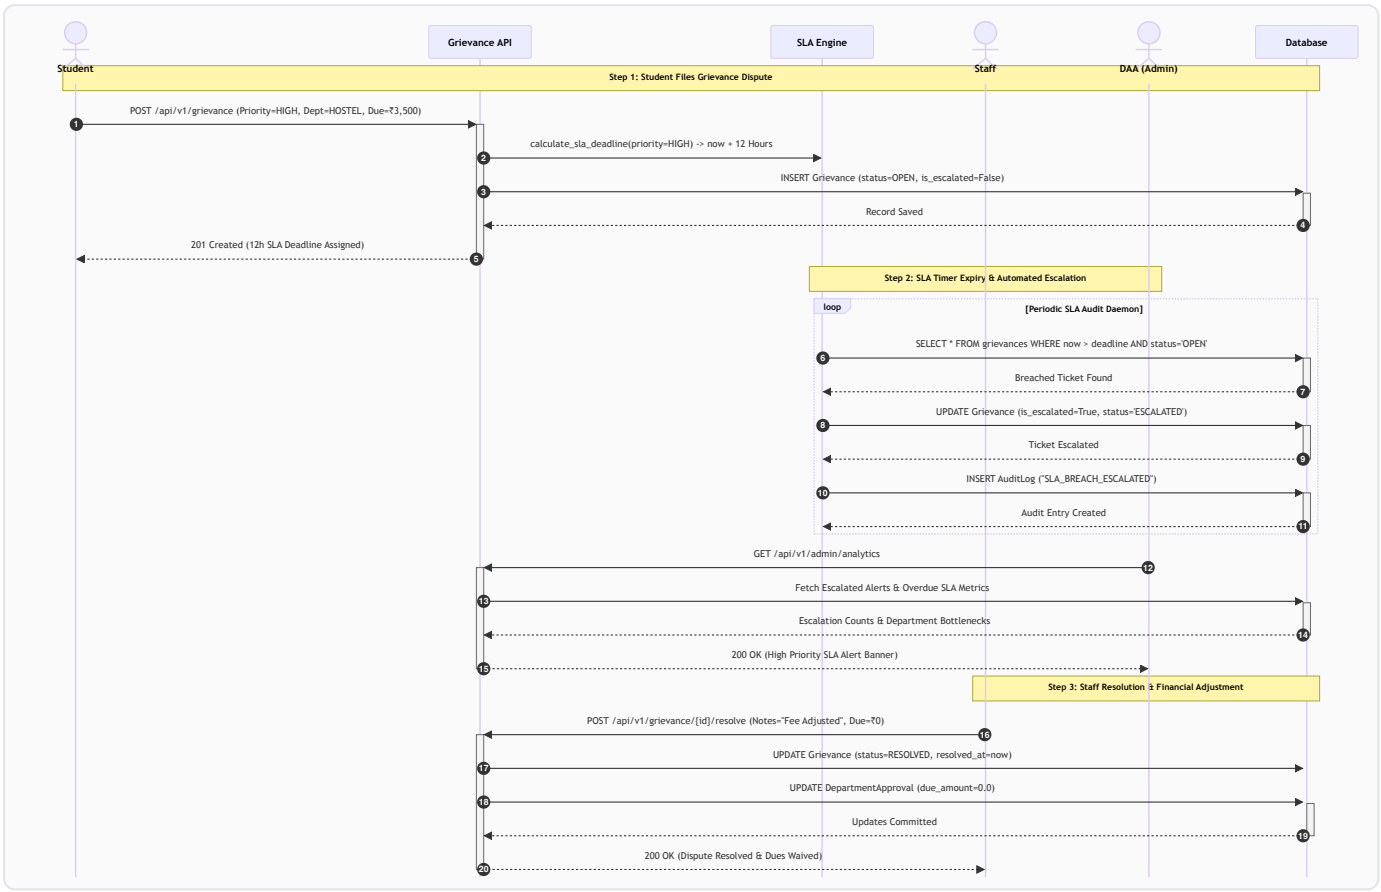

4. Interaction Models: Sequence Diagrams

The dynamic interaction between external actors, API gateways, business logic engines, and database layers is presented across three focused sequence diagrams:

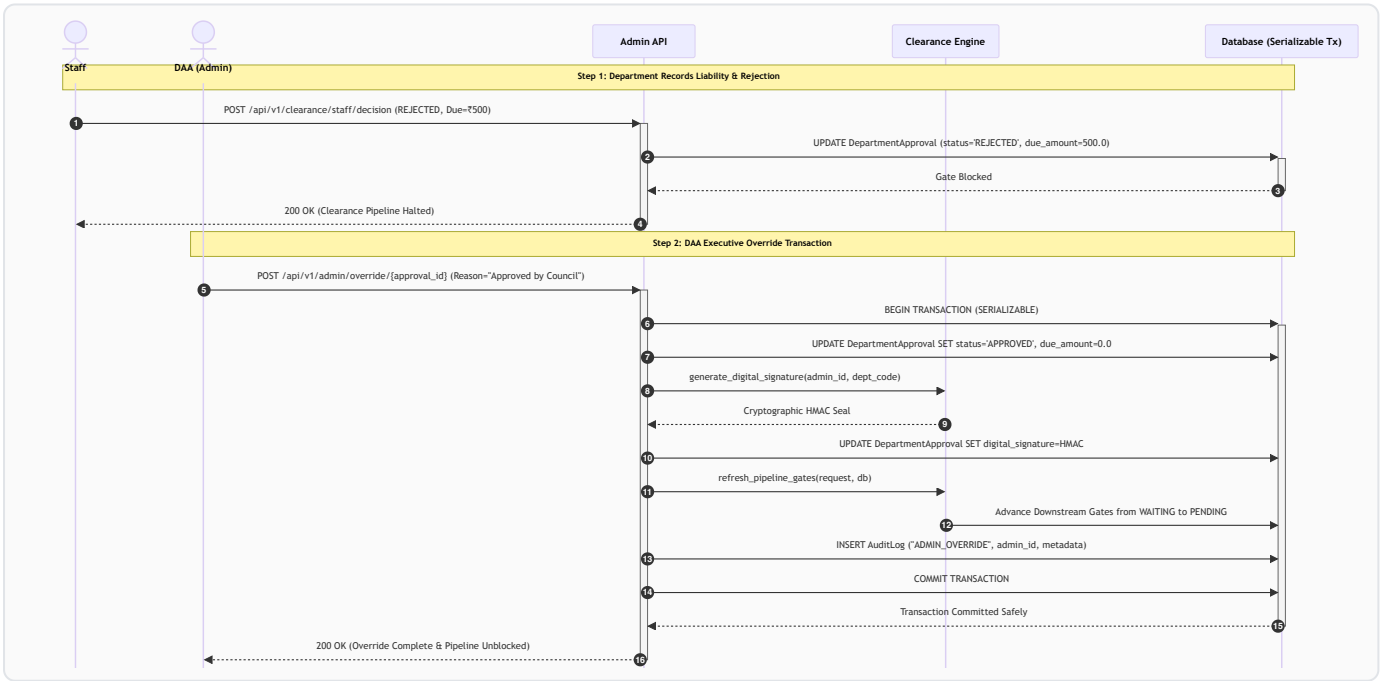

4.1 Sequence Diagram 1: Multi-Gate Approval & Cryptographic Minting

4.2 Sequence Diagram 2: Grievance Dispute Lifecycle & Automated SLA Escalation

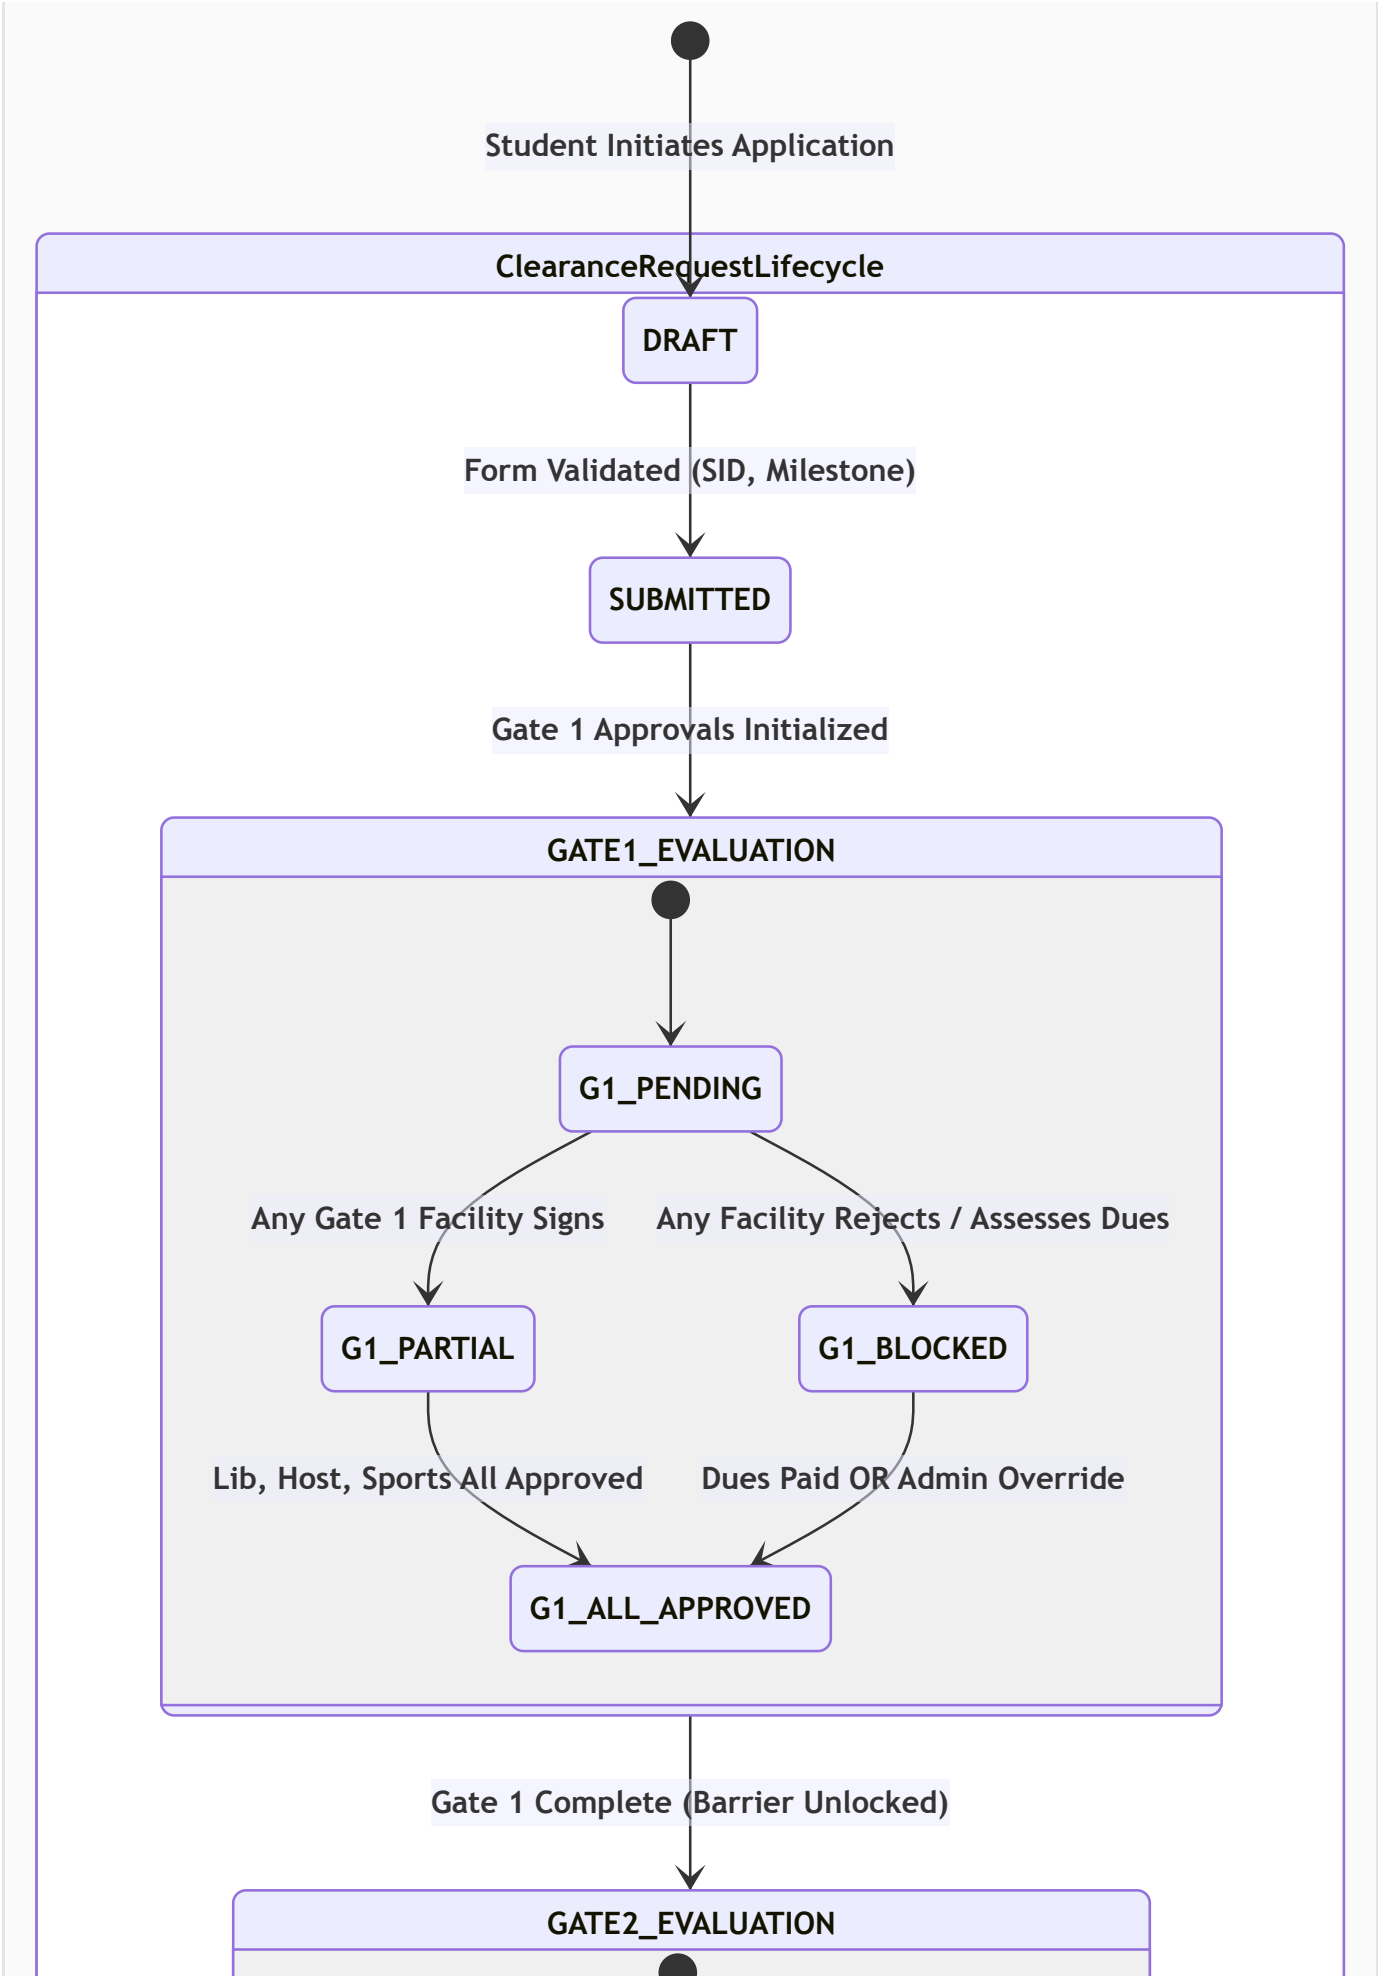

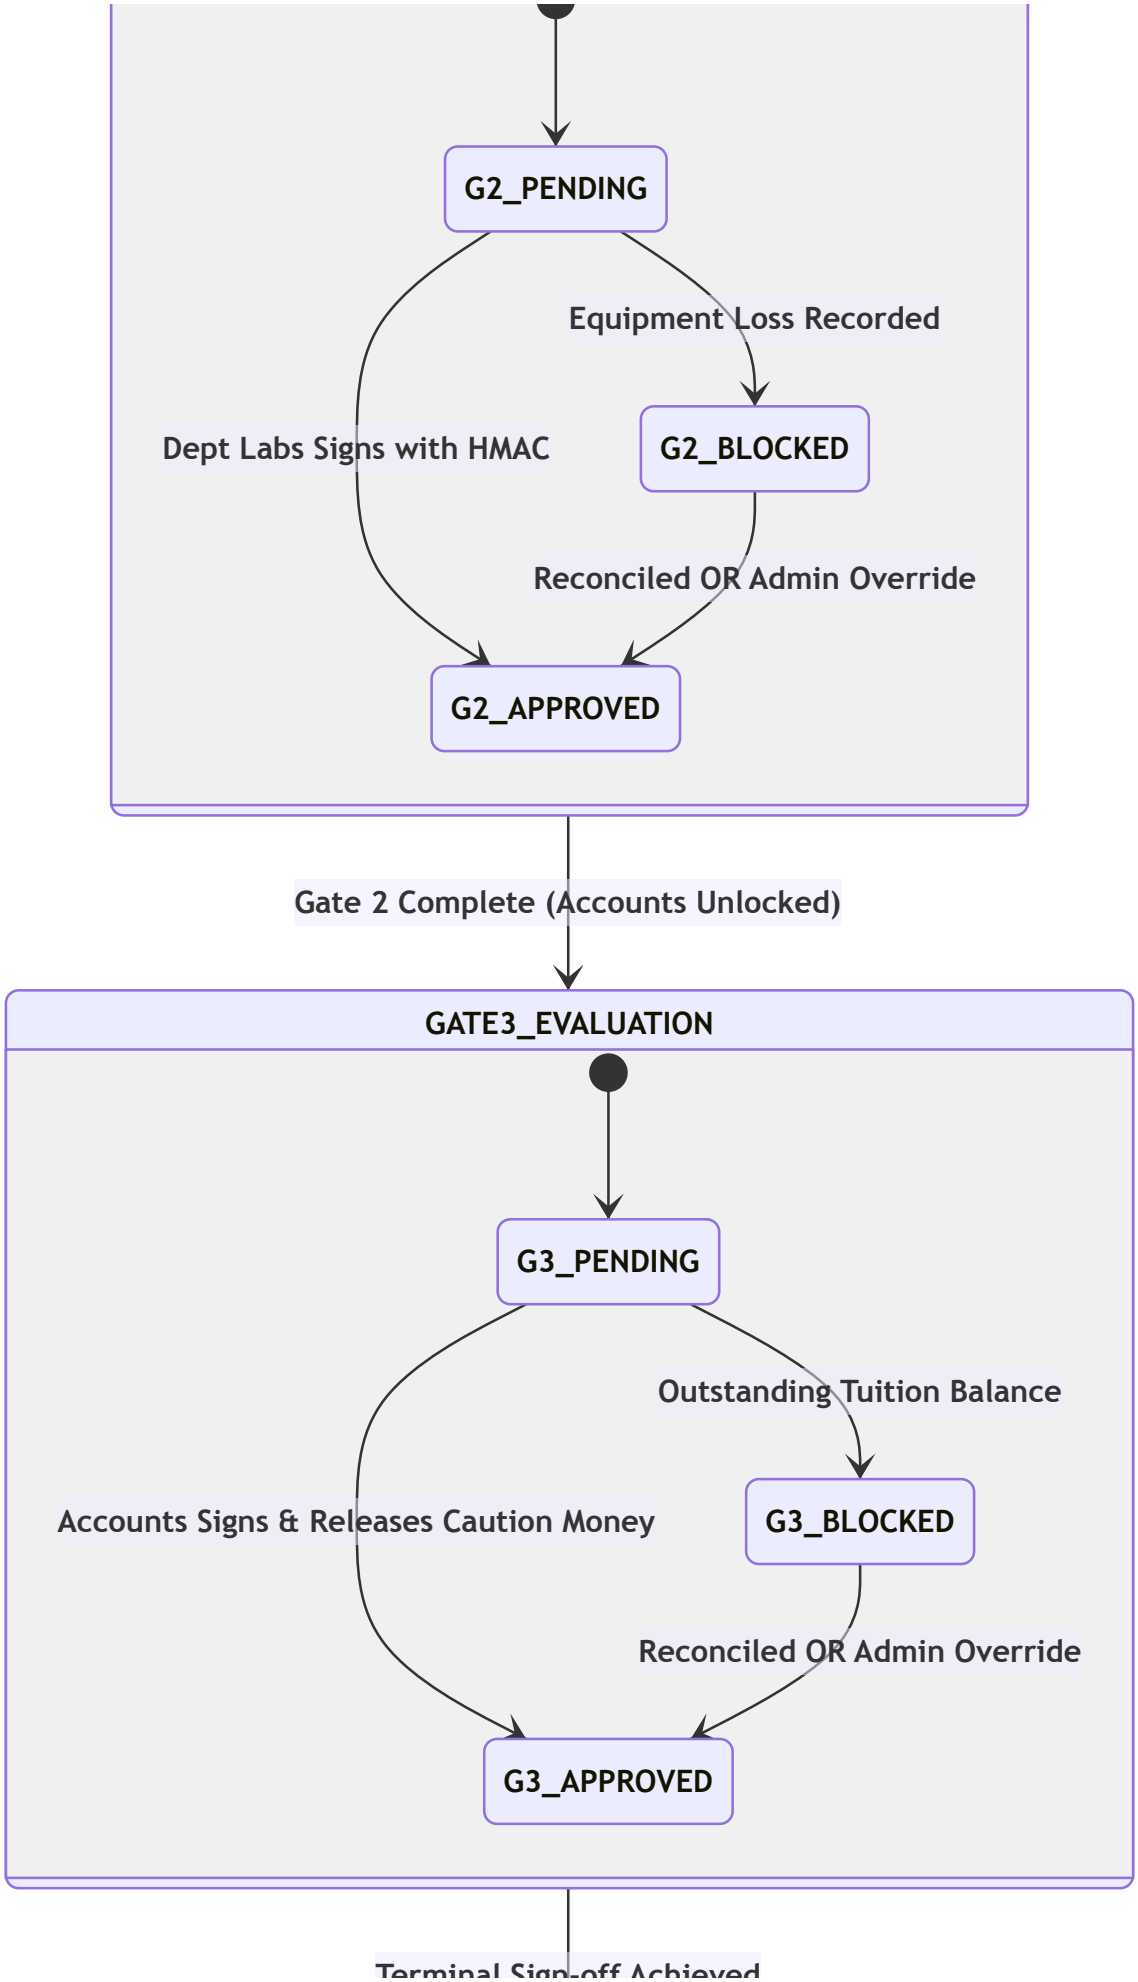

4.3 Sequence Diagram 3: Administrative Override & Concurrency Control

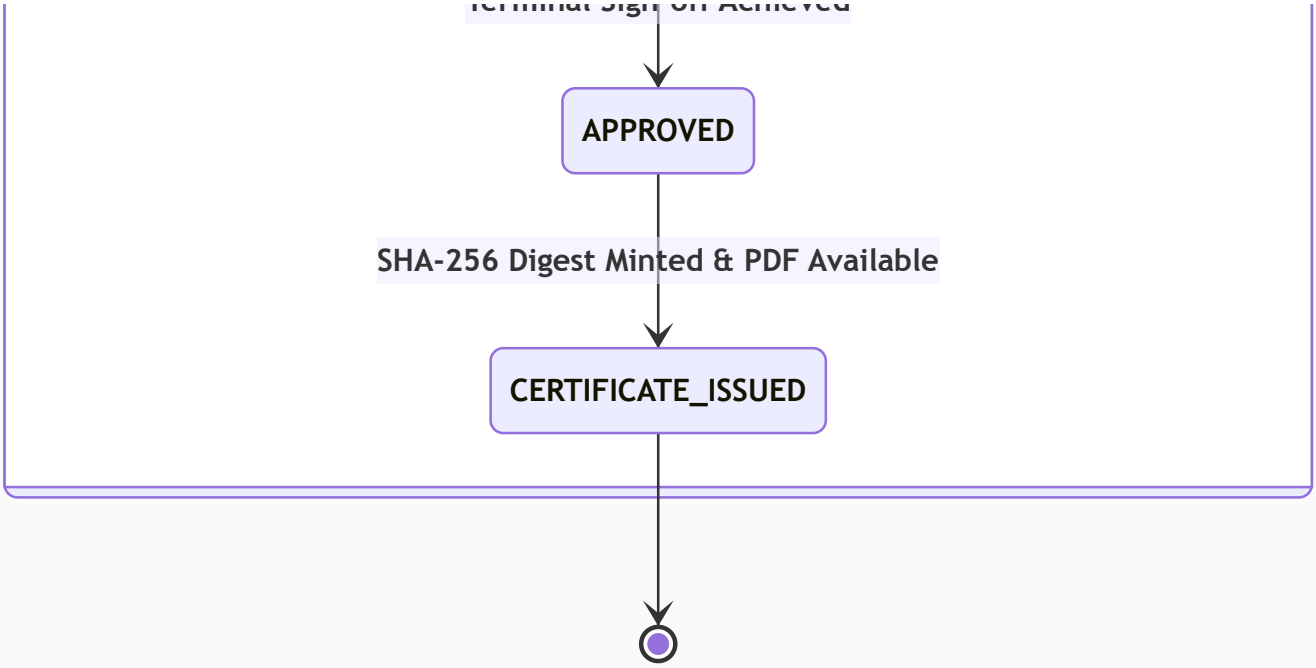

5. Behavioral State Machine Diagram

This state machine models the discrete status lifecycles of both the master clearance request and individual department approval gates:

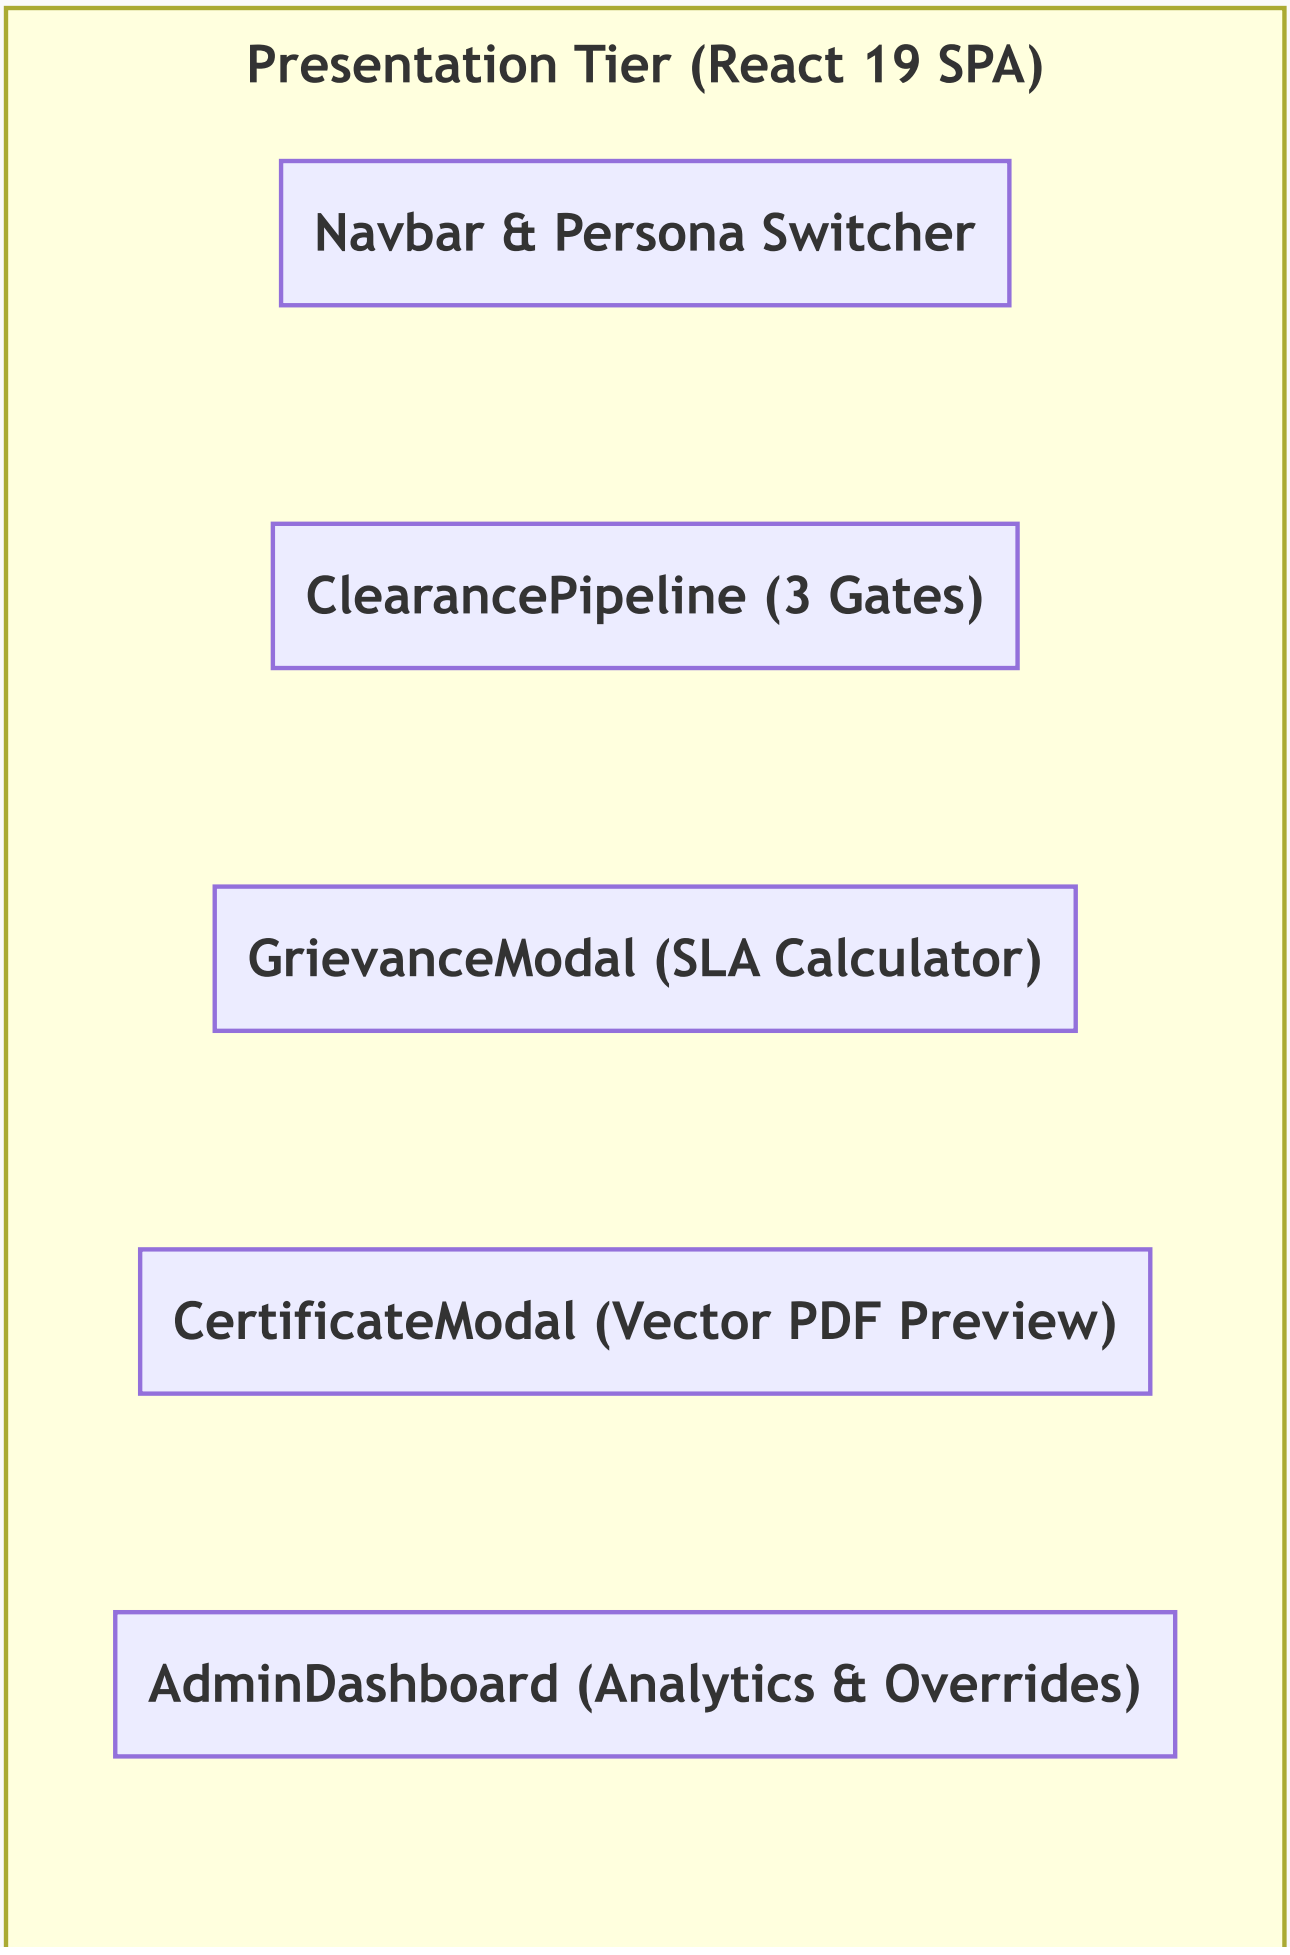

Student Initiates Application
ClearanceRequestLifecycle
DRAFT
Form Validated (SID, Milestone)
SUBMITTED
Gate 1 Approvals Initialized
GATE1_EVALUATION
G1_PENDING
Any Gate 1 Facility Signs
Any Facility Rejects / Assesses Dues
G1_PARTIAL
G1_BLOCKED
Lib, Host, Sports All Approved
Dues Paid OR Admin Override
G1_ALL_APPROVED
Gate 1 Complete (Barrier Unlocked)
GATE2_EVALUATION

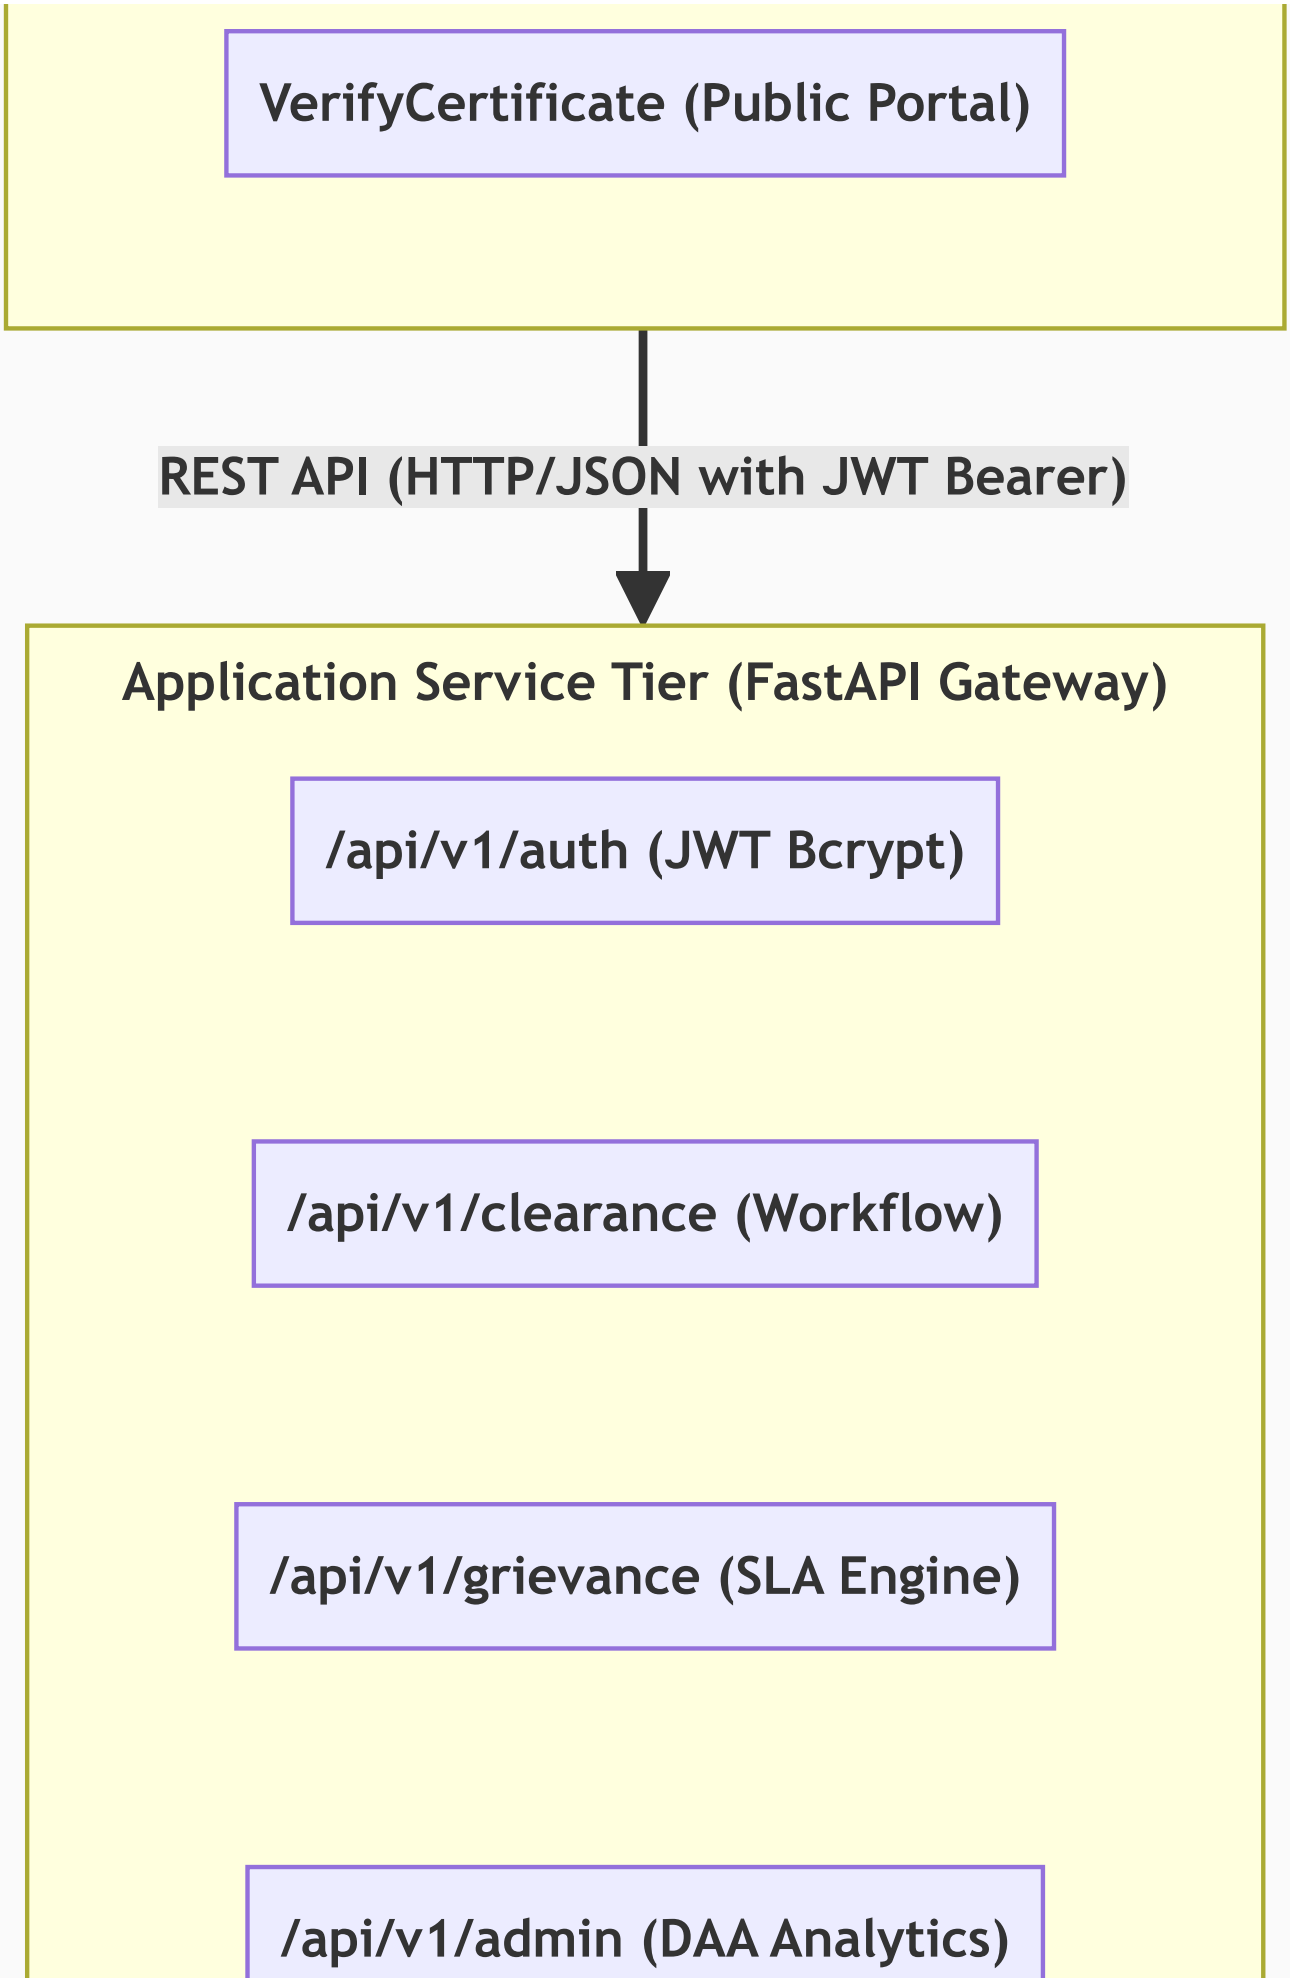

G2_PENDING
Equipment Loss Recorded
Dept Labs Signs with HMAC
G2_BLOCKED
Reconciled OR Admin Override
G2_APPROVED
Gate 2 Complete (Accounts Unlocked)
GATE3_EVALUATION
G3_PENDING
Outstanding Tuition Balance
Accounts Signs & Releases Caution Money
G3_BLOCKED
Reconciled OR Admin Override
G3_APPROVED
Terminal Sign-off Achieved

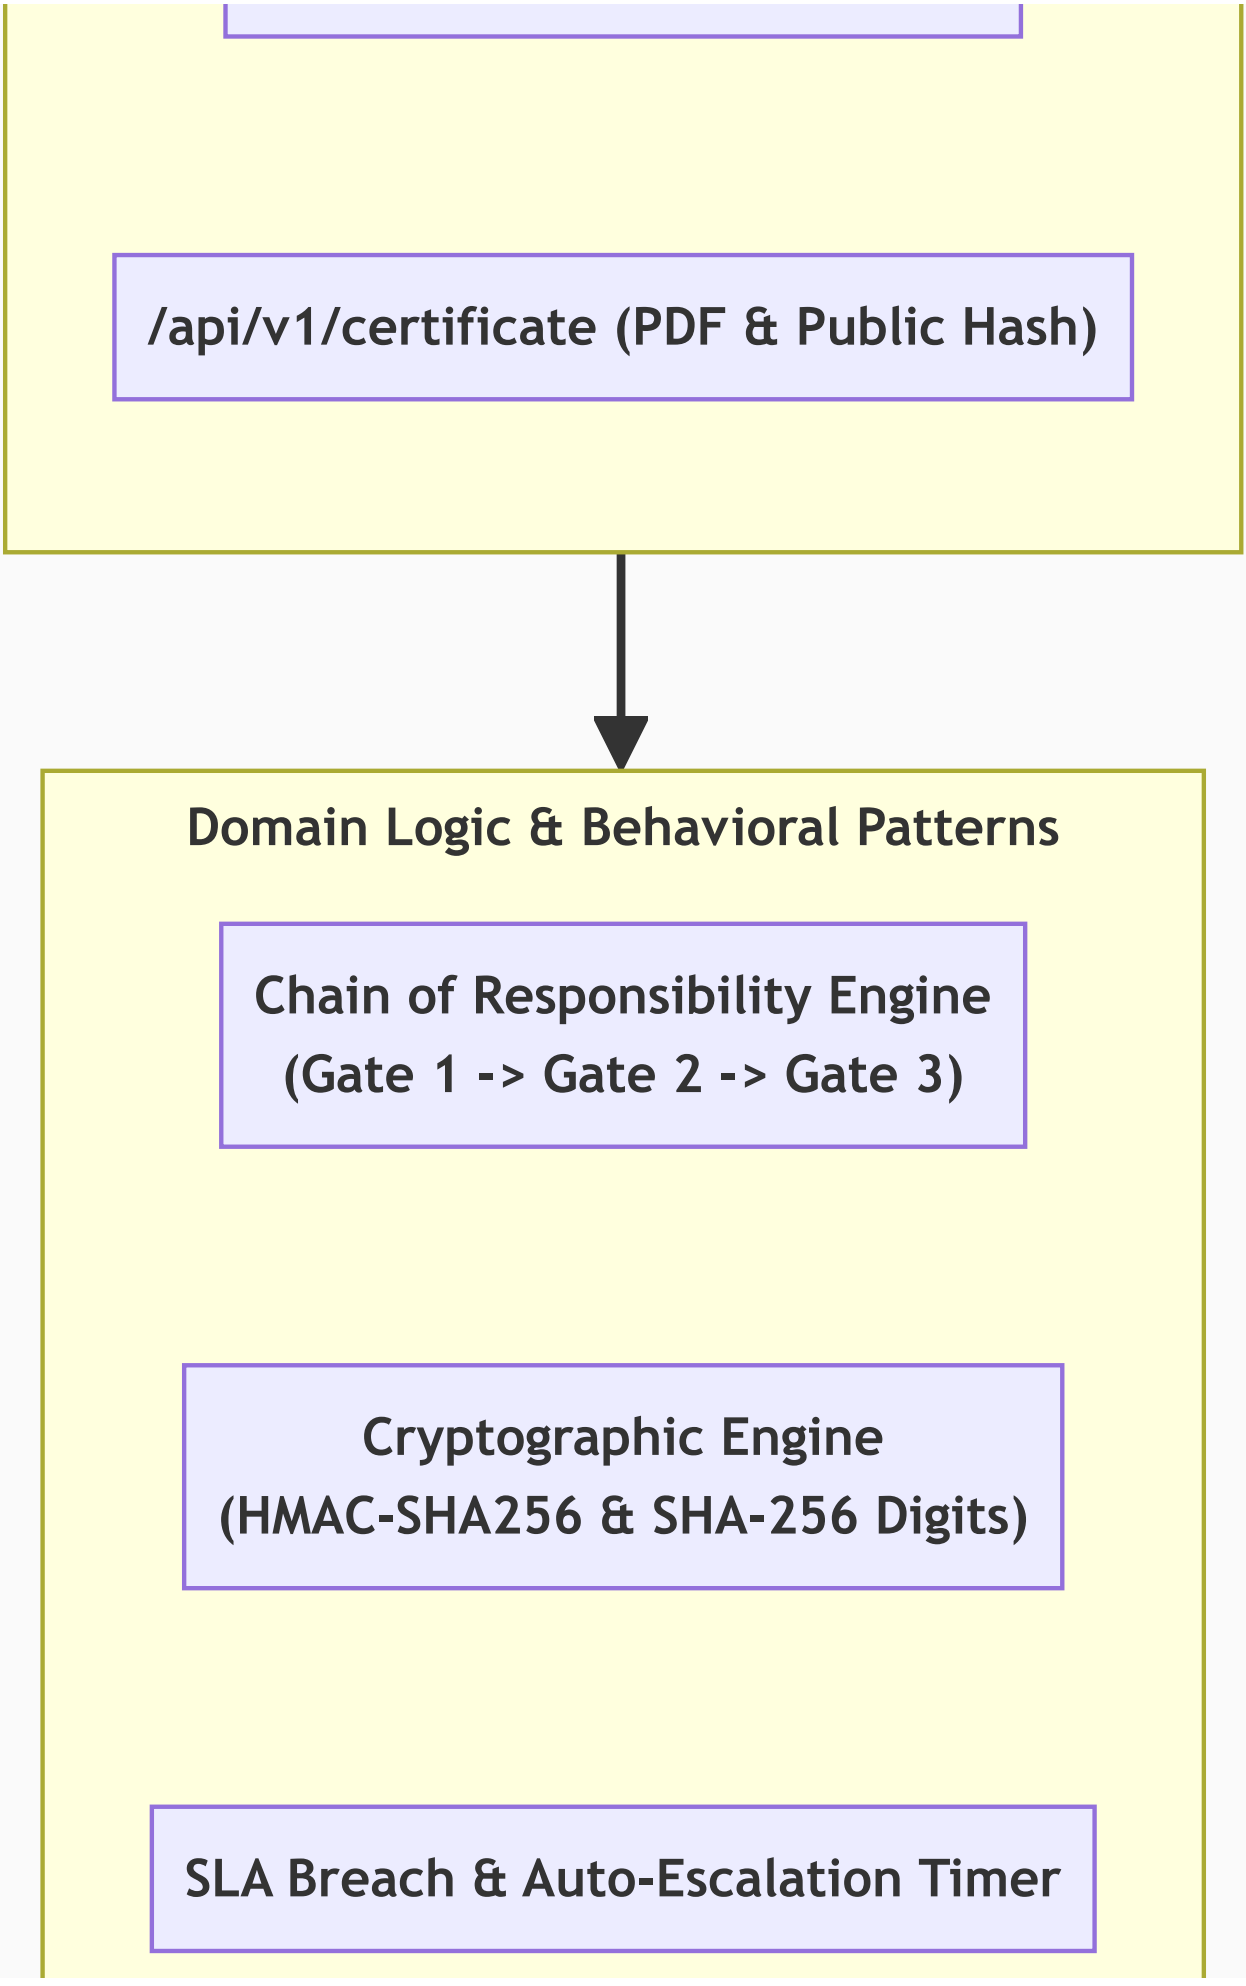

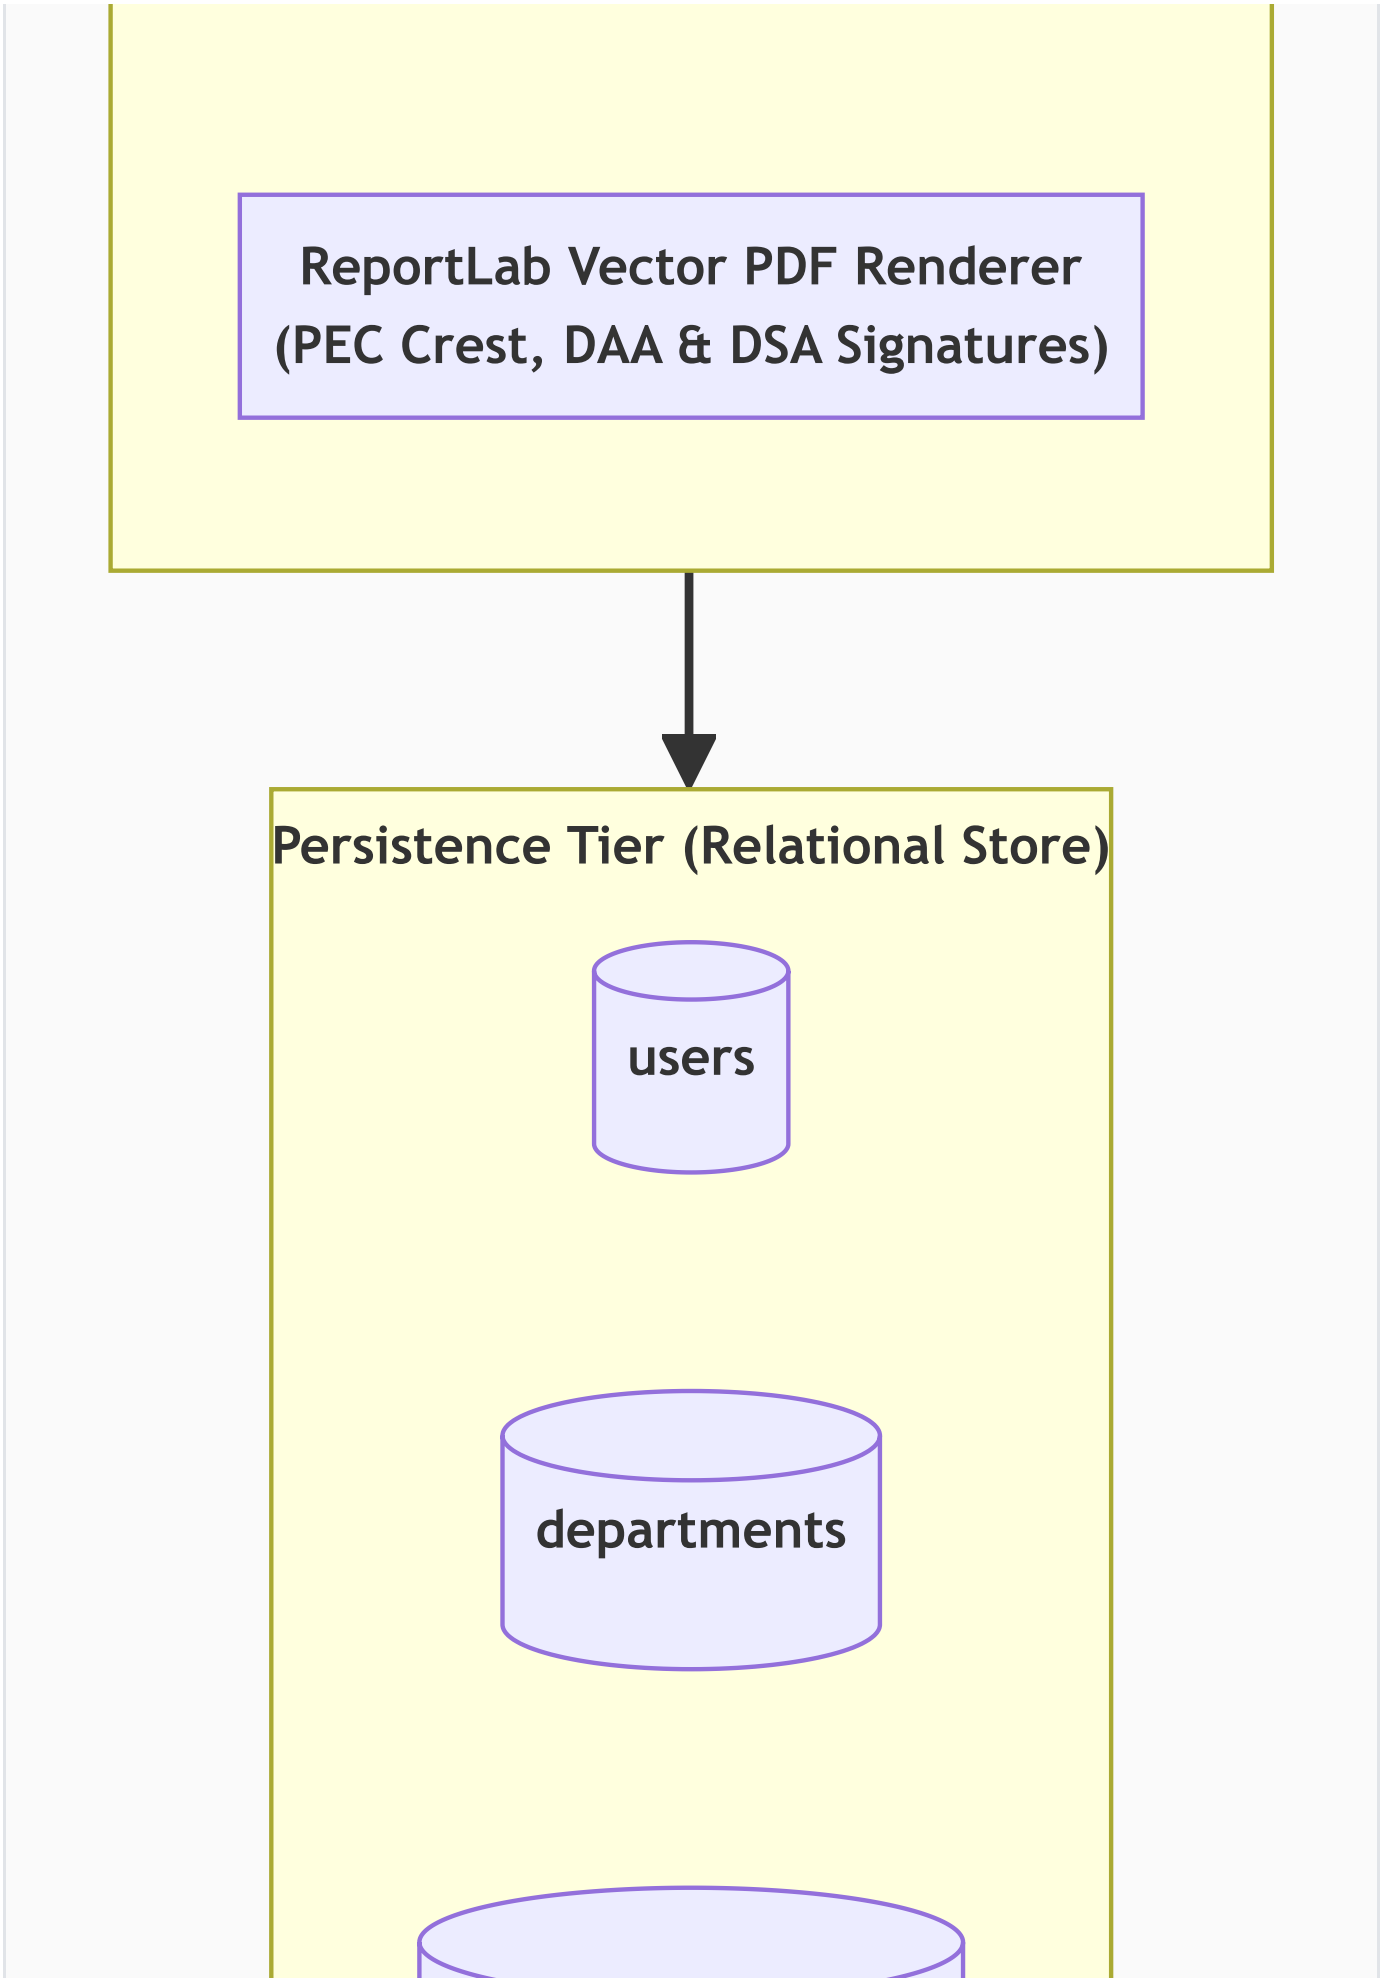

6. System Architecture & Component Deployment Diagram

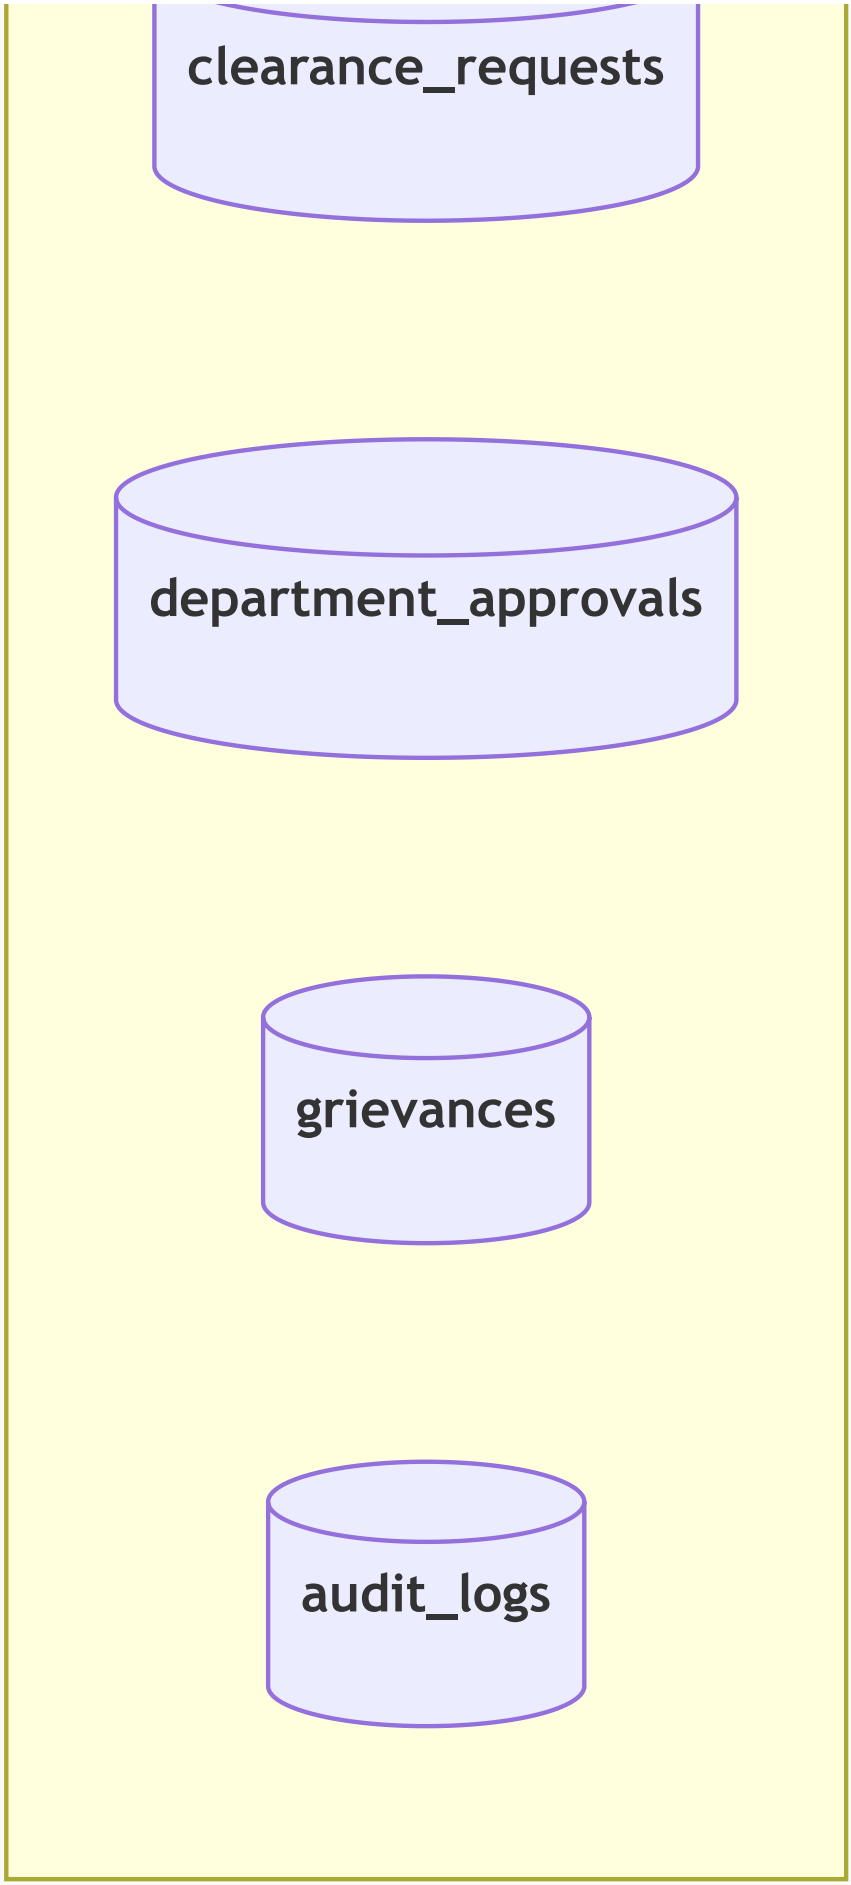

The component diagram defines the physical and logical boundaries of the system, verifying complete separation between presentation, application services, and persistent storage:

Presentation Tier (React 19 SPA)
Navbar & Persona Switcher
ClearancePipeline (3 Gates)
GrievanceModal (SLA Calculator)
CertificateModal (Vector PDF Preview)
AdminDashboard (Analytics & Overrides)

VerifyCertificate (Public Portal)
REST API (HTTP/JSON with JWT Bearer)
Application Service Tier (FastAPI Gateway)
/api/v1/auth (JWT Bcrypt)
/api/v1/clearance (Workflow)
/api/v1/grievance (SLA Engine)
/api/v1/admin (DAA Analytics)

/api/v1/certificate (PDF & Public Hash)
Domain Logic & Behavioral Patterns
Chain of Responsibility Engine
(Gate 1 -> Gate 2 -> Gate 3)
Cryptographic Engine
(HMAC-SHA256 & SHA-256 Digits)
SLA Breach & Auto-Escalation Timer

ReportLab Vector PDF Renderer
(PEC Crest, DAA & DSA Signatures)
Persistence Tier (Relational Store)
