Unified Modeling Language (UML) Structural & Behavioral Models

Academic Grievance, No-Dues & Clearance Automation Engine

Punjab Engineering College (Deemed to be University), Sector 12, Chandigarh
Submitted by: Raghav Bhardwaj & Karan Jain
Submitted to: Dr. Rajesh Bhatia (Course: Software Engineering)

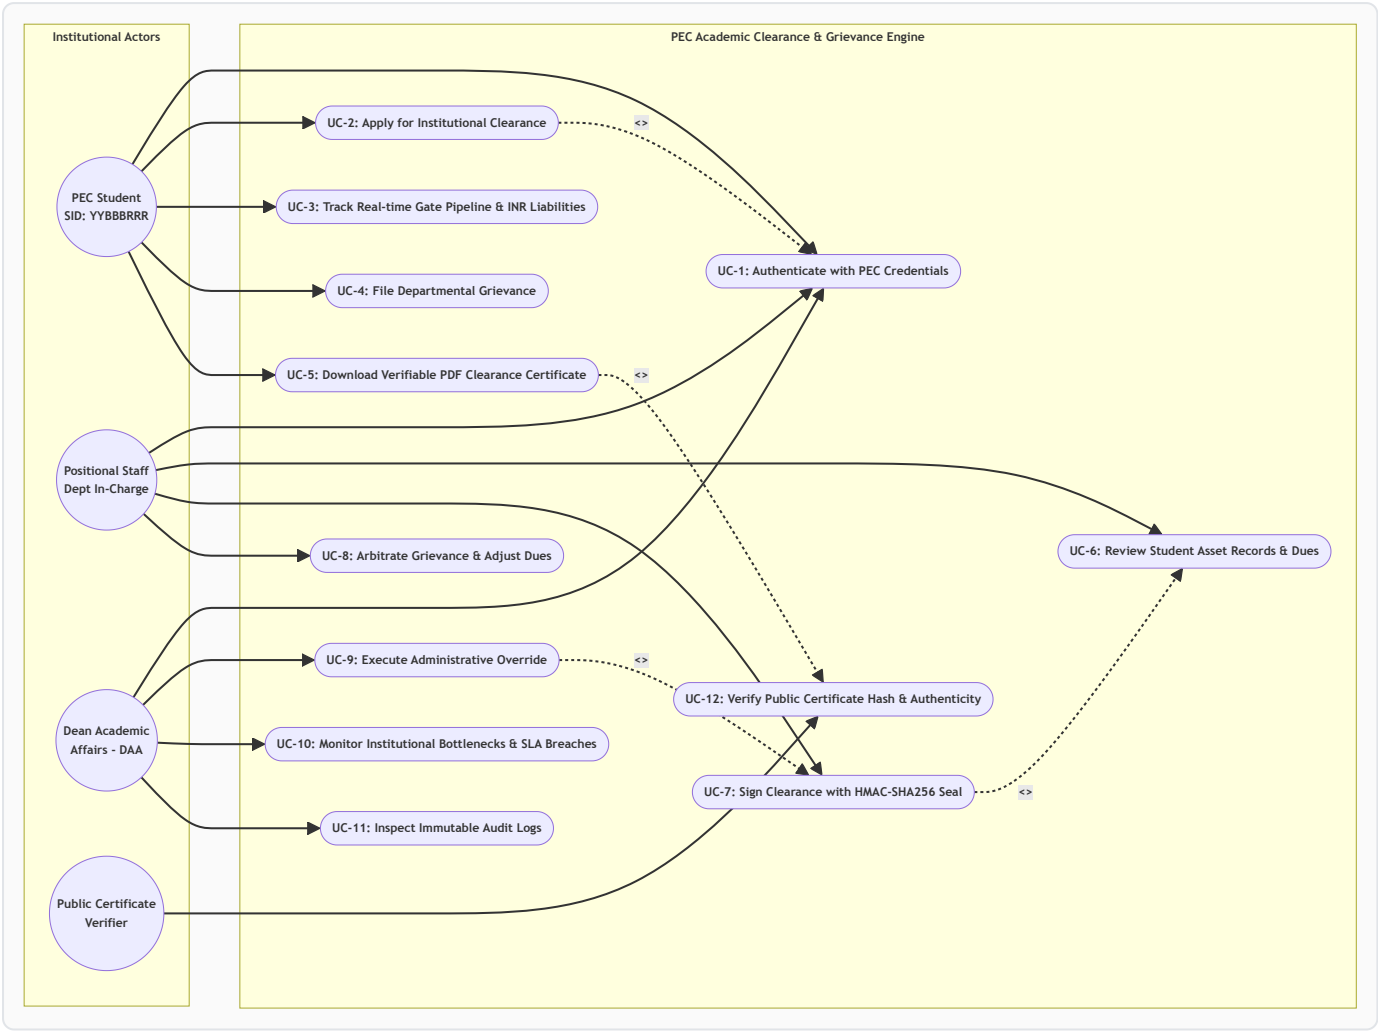

---

1. Use Case Model & Diagram

1.1 Actors & Role Boundaries

- **Student Actor:** Registered PEC student identified by an 8-digit SID (e.g., `22103042`).
- **Positional Staff Actor:** Departmental authority operating under institutional designations.
- **Dean Academic Affairs (DAA / Admin Actor):** Executive authority holding override privileges and institutional audit oversight.
- **Public Certificate Verifier Actor:** External unauthenticated party validating clearance credentials.

1.2 Use Case Diagram

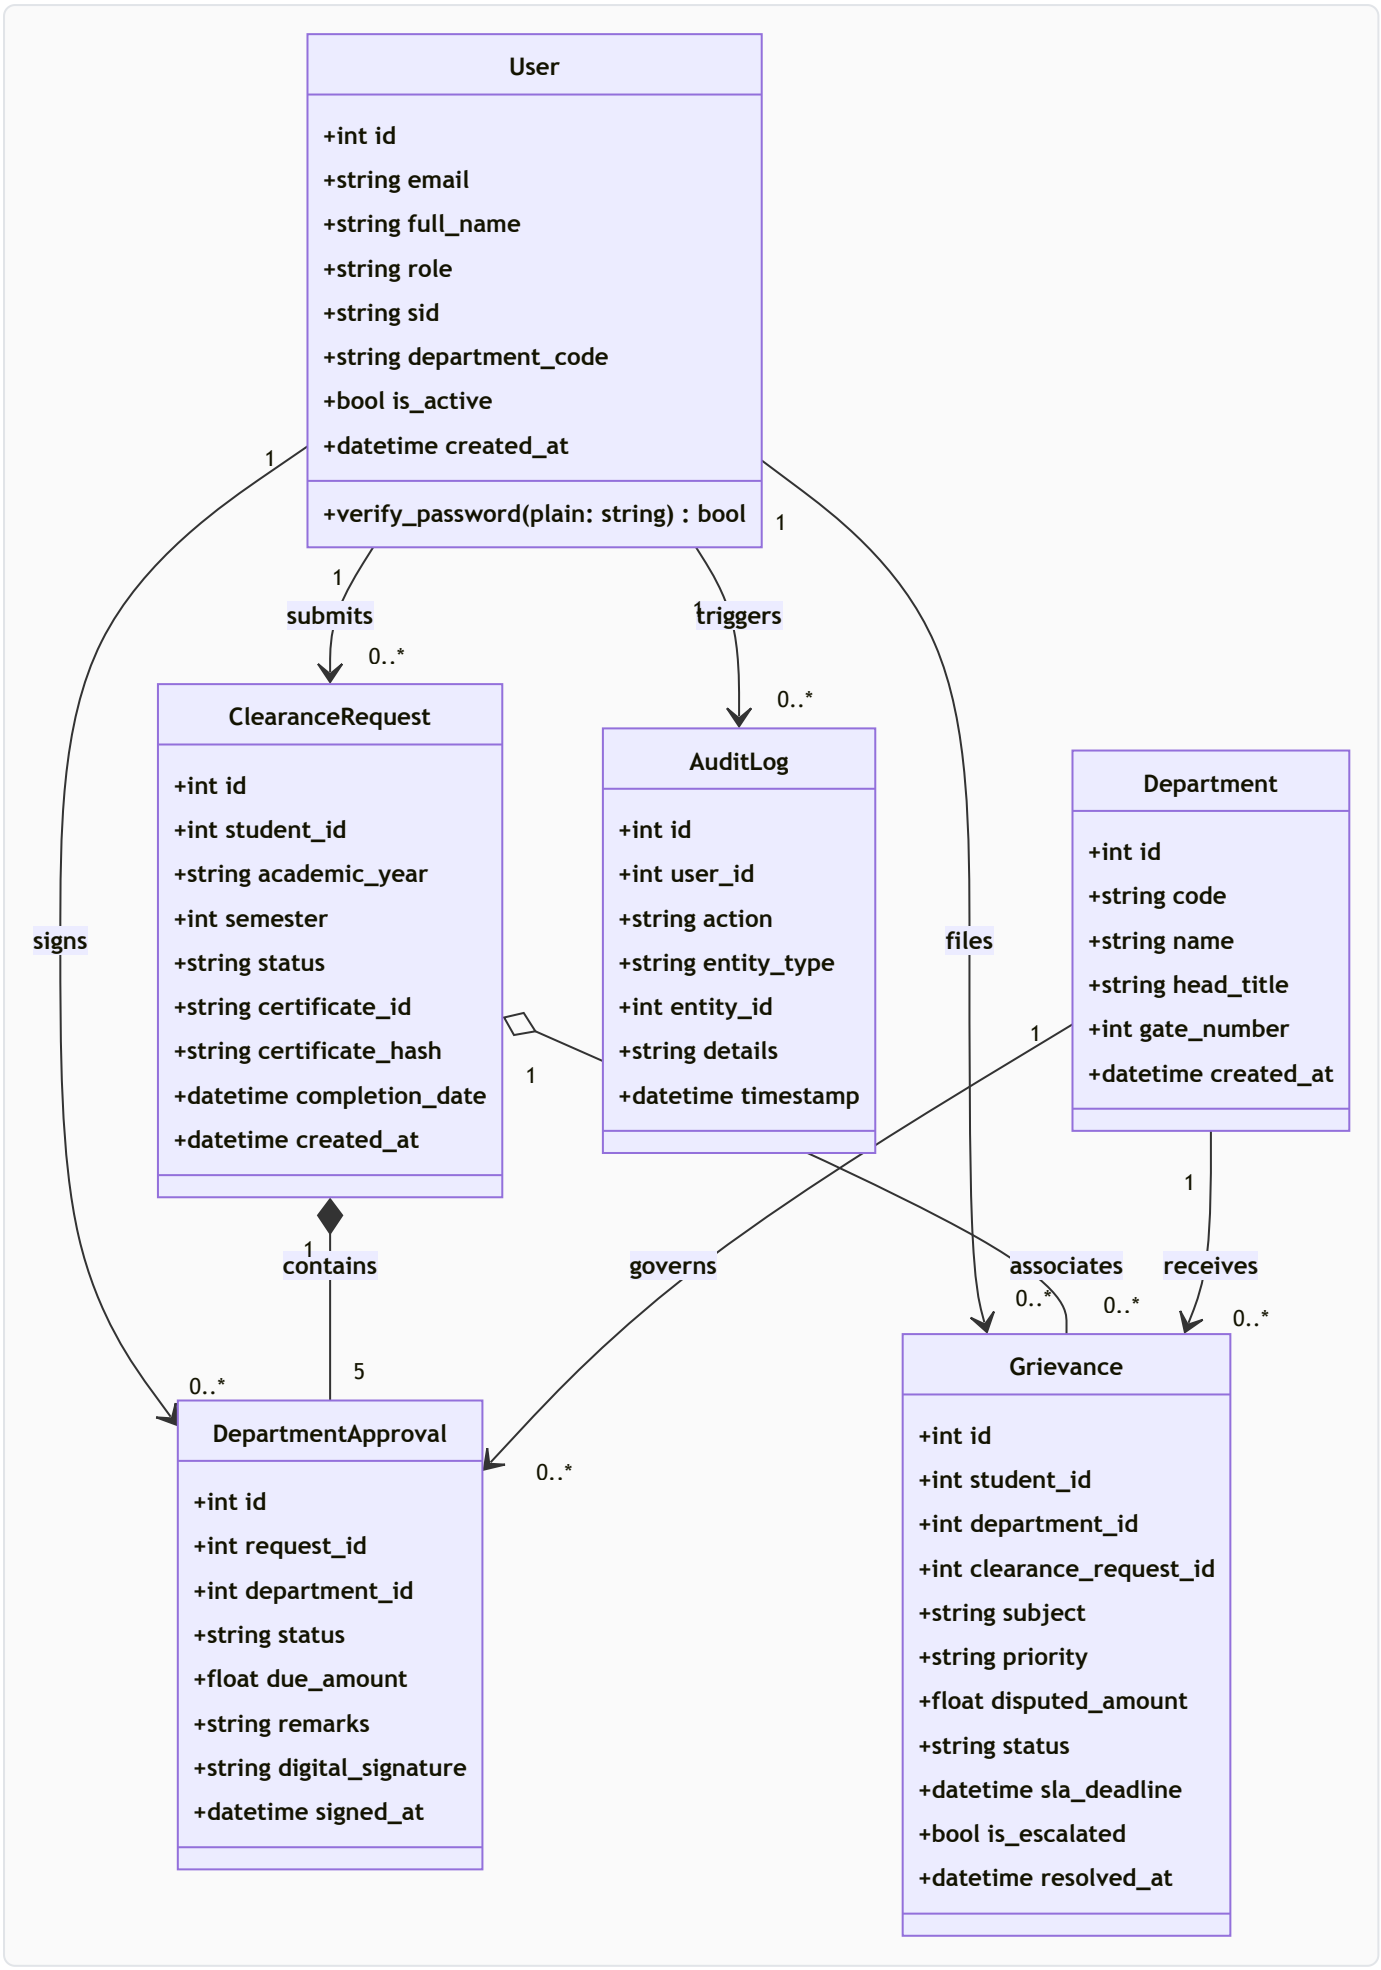

2. Static Structural Model: Class Diagram

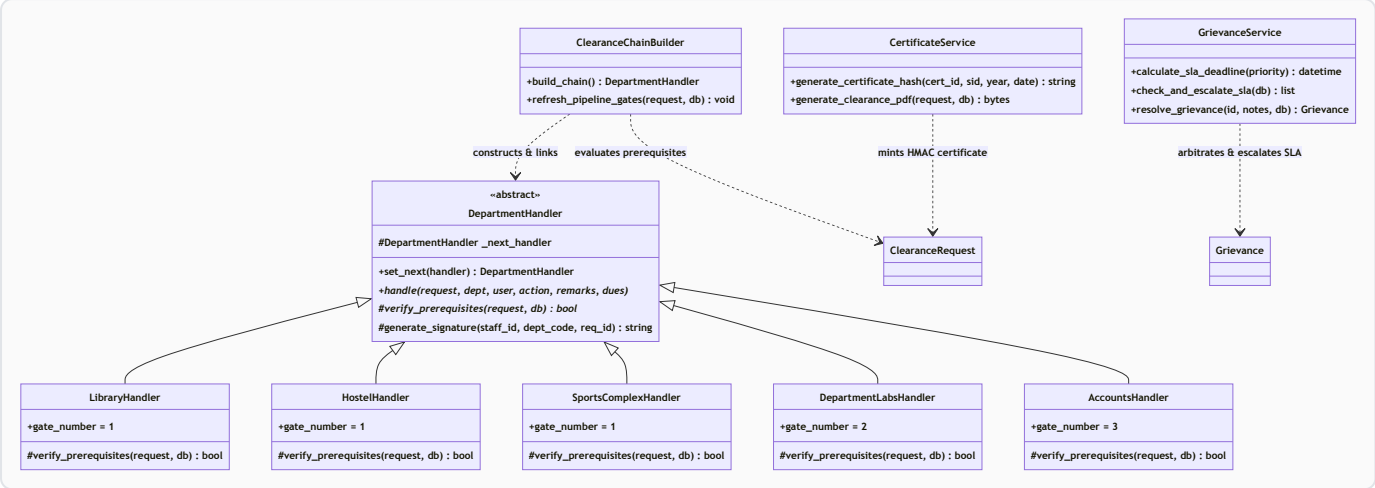

The static structural architecture of the system is divided into two focused, high-contrast class diagrams to ensure maximum visual clarity and readability:

1. **Core Domain Entity Model** (relational data models, attributes, methods, associations, and multiplicities)
2. **Behavioral Chain of Responsibility & Services Model** (handler hierarchy, gate verification, and service orchestration)

2.1 Core Domain Entity Class Diagram

2.2 Behavioral Chain of Responsibility & Service Orchestration Diagram

3. Dynamic Behavioral Model: Activity Diagram

This activity diagram models the end-to-end dynamic workflow of a PEC clearance request, illustrating parallel concurrency forks, barrier joins, and sequential dependency gates:

Start: Student Submits Clearance
Initialize 5 Department Approval Records
Gate 1: Concurrent Central Facilities (Parallel Reviews)
FORK: Gate 1 Parallel Review
Library Books / Dues Clear?
Hostel Room & Mess Clear?
Sports Equipment Clear?
Clear
Dues
Clear
Dues
Clear
Dues
Approved: Sign HMAC Library
Rejected: Overdue Books / Fine
Approved: Sign HMAC Hostel
Rejected: Mess Dues Liability
Approved: Sign HMAC Sports
Rejected: Equipment Penalty
JOIN: Gate 1 Barrier
All 3 Gate 1 Facilities Approved?
No
Yes
Gate 1 Blocked: Resolve Dues or Appeal
DAA Override / Dues Settled?
Resolved / Overridden
Gate 2: Department Computing & Hardware Labs
Unlock Gate 2: Advance Labs to PENDING
Lab Kits & Workstation Clear?
Clear
Missing
Approved: Sign HMAC Labs
Rejected: Hardware Liability

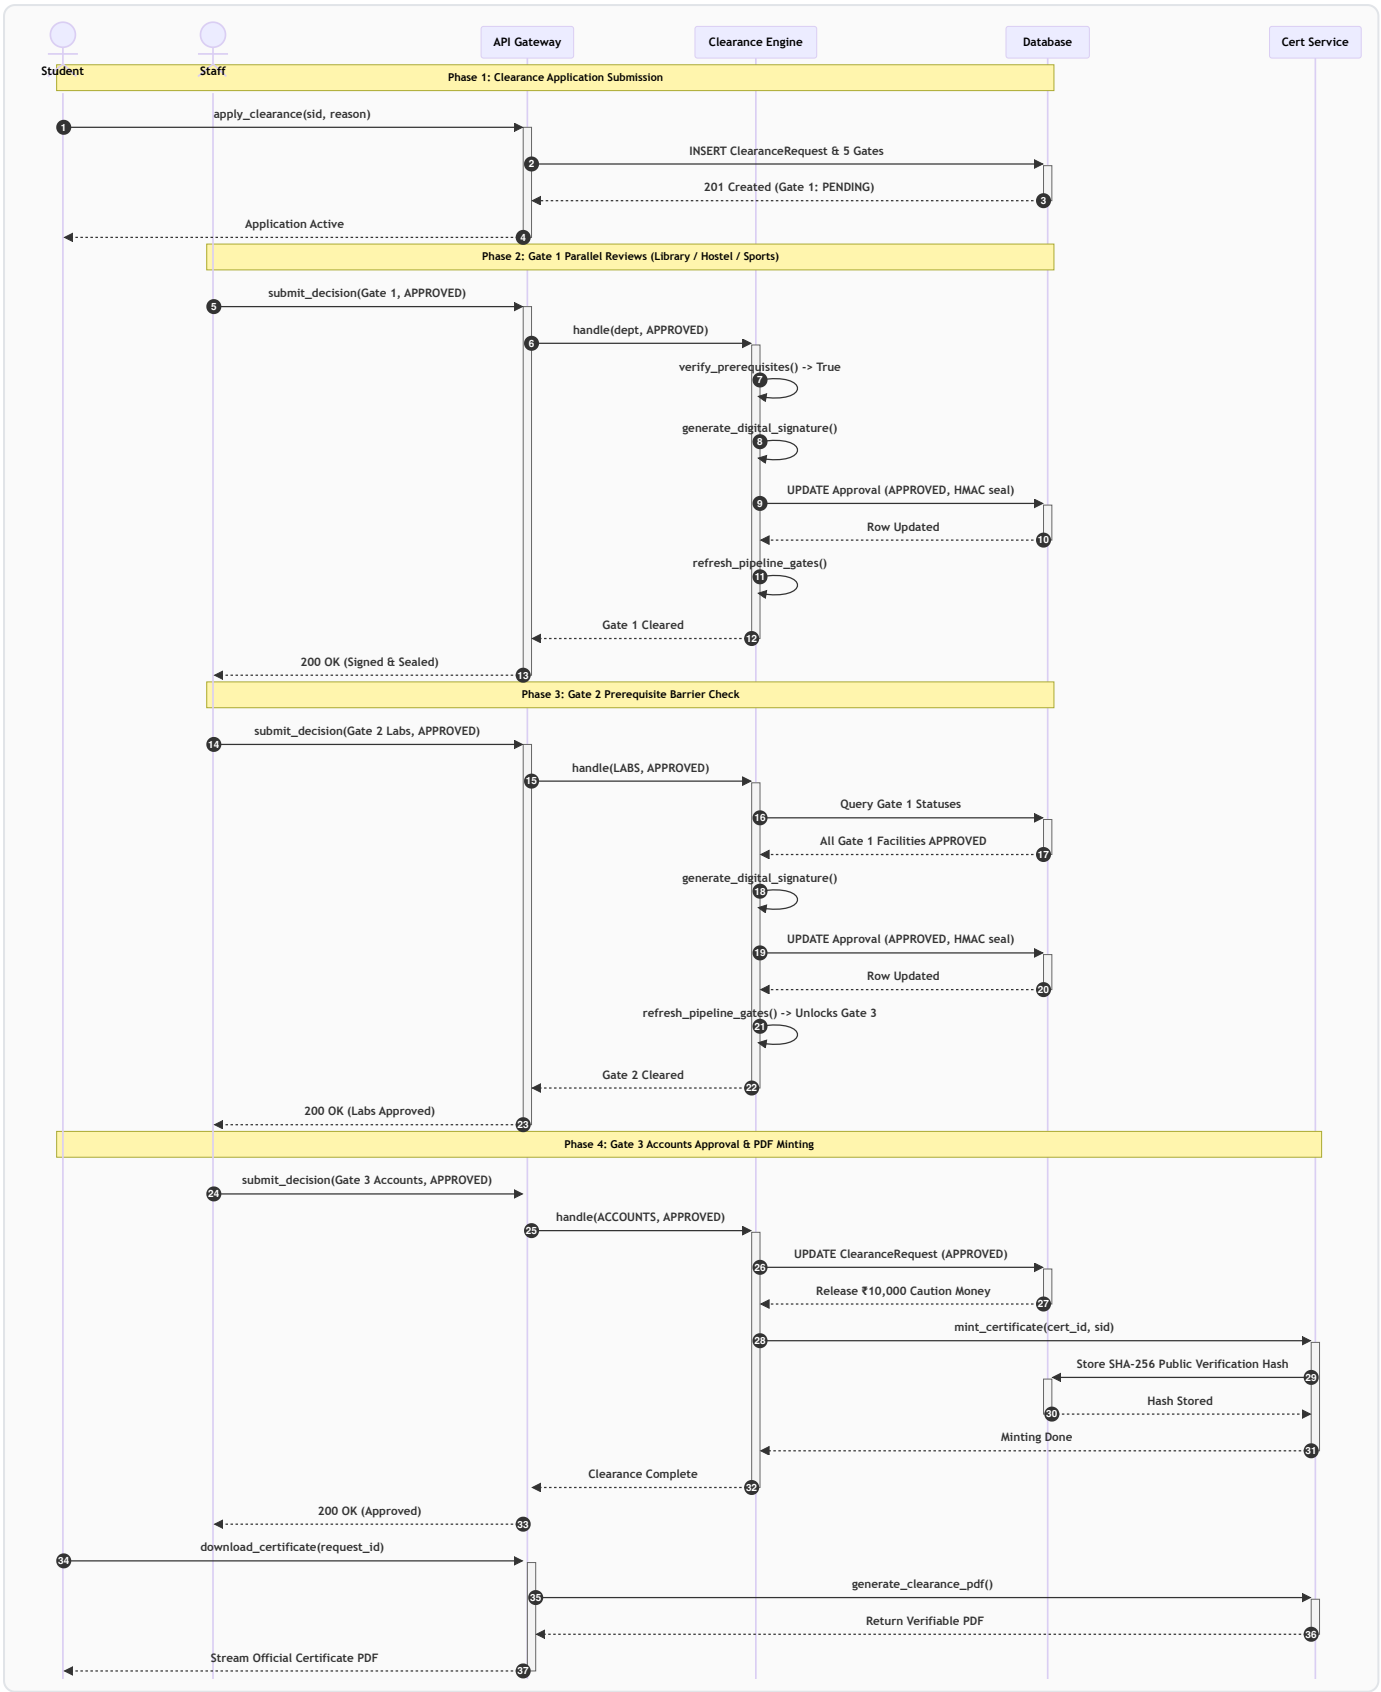

Gate 2 Blocked: Return Assets or DAA Override
DAA Override / Assets Returned?
Resolved
Unresolved
Gate 3: Institutional Accounts & Finance Branch
Unlock Gate 3: Advance Accounts to PENDING
Semester Tuition & Fees Clear?
Dues
Rejected: Unpaid Balance
Clear
Unresolved
Gate 3 Blocked: Hold Caution Money Escrow
Fee Payment / DAA Waiver?
Settled
Unsettled
Approved: Sign HMAC Accounts
Halt Progress: Await Resolution
Validate All 5 Seals & Authorize ₹10,000 Caution Money Refund
Mint Certificate ID & Compute SHA-256 Digest
Generate Verifiable PDF Certificate
End: Clearance Issued

4. Interaction Models: Sequence Diagrams

The dynamic interaction between external actors, API gateways, business logic engines, and database layers is presented across three focused sequence diagrams. Each diagram is structured with concise messages and clear phase notes for readability:

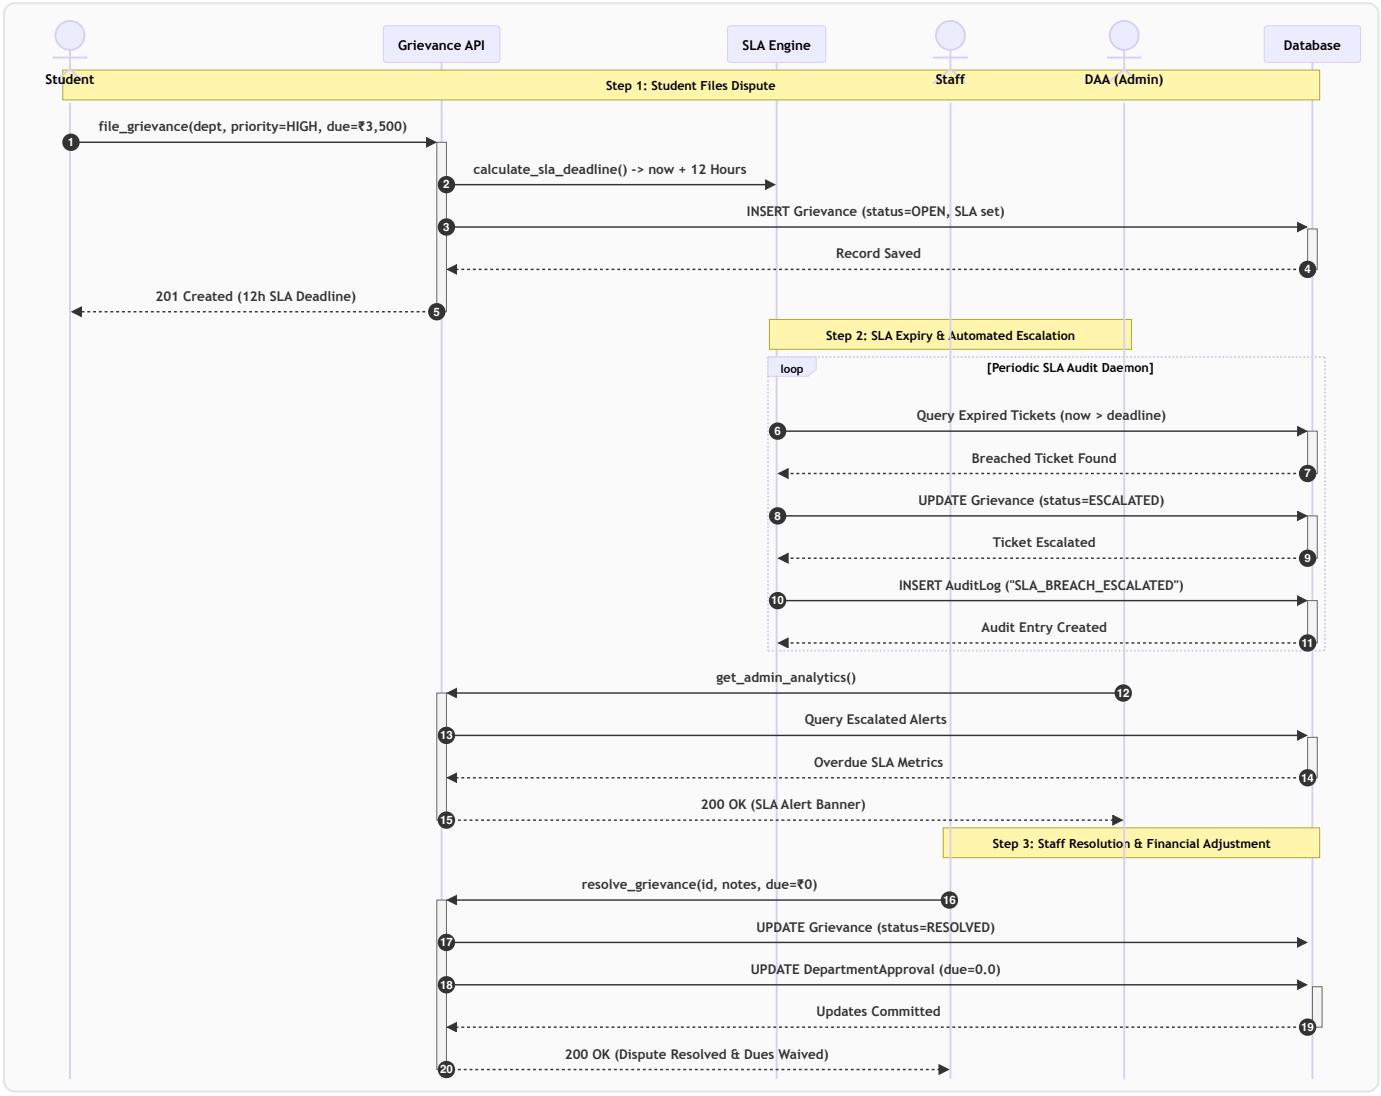

4.1 Sequence Diagram 1: Multi-Gate Approval & Cryptographic Minting

This diagram traces the standard clearance path from student initiation through Gate 1 parallel reviews, Gate 2 prerequisite verification, Gate 3 financial reconciliation, and final certificate minting:

Student
Staff
API Gateway
Clearance Engine
Database
Cert Service
Phase 1: Clearance Application Submission
apply_clearance(sid, reason)
INSERT ClearanceRequest & 5 Gates
201 Created (Gate 1: PENDING)
Application Active
Phase 2: Gate 1 Parallel Reviews (Library / Hostel / Sports)
submit_decision(Gate 1, APPROVED)
handle(dept, APPROVED)
verify_prerequisites() -> True
generate_digital_signature()
UPDATE Approval (APPROVED, HMAC seal)
Row Updated
refresh_pipeline_gates()
Gate 1 Cleared
200 OK (Signed & Sealed)
Phase 3: Gate 2 Prerequisite Barrier Check
submit_decision(Gate 2 Labs, APPROVED)
handle(LABS, APPROVED)
Query Gate 1 Statuses
All Gate 1 Facilities APPROVED
generate_digital_signature()
UPDATE Approval (APPROVED, HMAC seal)
Row Updated
refresh_pipeline_gates() -> Unlocks Gate 3
Gate 2 Cleared
200 OK (Labs Approved)
Phase 4: Gate 3 Accounts Approval & PDF Minting
submit_decision(Gate 3 Accounts, APPROVED)
handle(ACCOUNTS, APPROVED)
UPDATE ClearanceRequest (APPROVED)
Release ₹10,000 Caution Money
mint_certificate(cert_id, sid)
Store SHA-256 Public Verification Hash
Hash Stored
Minting Done
Clearance Complete
200 OK (Approved)
download_certificate(request_id)
generate_clearance_pdf()
Return Verifiable PDF
Stream Official Certificate PDF

4.2 Sequence Diagram 2: Grievance Dispute Lifecycle & Automated SLA Escalation

This diagram models the grievance redressal lifecycle when a student disputes an assessed fine or liability, including dynamic SLA deadline assignment, background audit scanning, and DAA escalation:

4.3 Sequence Diagram 3: Administrative Override & Concurrency Control

This diagram details the Dean Academic Affairs (DAA) executive override mechanism executed within a serializable database transaction to eliminate concurrency race conditions:
